To the Learner:

Welcome to Fundamental Mathematics Book Five.

Adult Math Learners

You have the skills you need to be a strong student in this class.

Adult math learners have many skills. They have a lot of life experience. They also use math in their everyday lives. This means that adult math learners may already know some of what is being taught in this book. Use what you already know with confidence!

Grades Record

You have also been given a sheet to write down your grades. After each test, you can write in the mark. This way you can keep track of your grades as you go through the course. This is a good idea to use in all your courses. You can find this grade sheet at the end of the book.

How to Use this Book

This textbook has:

- ✓ A **Table of Contents** listing the units, the major topics and subtopics.
- ✓ A **Glossary** giving definitions for mathematical vocabulary used in the course.
- ✓ A **grades record** to keep track of your marks.

The textbook has many exercises; some are quite short, but others have a great number of questions. **You do not have to do every single question!**

- Do as many questions as **you** feel are necessary for you to be confident in your skill.
- It is best to do **all** the word problems.
- If you leave out some questions, try doing every second or every third question. Always do some questions from the end of each exercise because the questions usually get harder at the end. You might use the skipped questions for review before a test.
- If you are working on a difficult skill or concept, do half the exercise one day and finish the exercise the next day. That is a much better way to learn.

Self-tests at the end of most topics have an **Aim** at the top. If you do not meet the aim, talk to your instructor, find what is causing the trouble, and do some more review before you go on.

A **Review and Extra Practice** section is at the end of each unit. If there is an area of the unit that you need extra practice in, you can use this. Or, if you want, you can use the section for more review.

A **Practice Test** is available for each unit. You may:

- Write the practice test after you have studied the unit as a practice for the end-of-chapter test, OR
- You might want to write it before you start the unit to find what you already know and which areas you need to work on.

Unit tests are written after each unit. Again, you must reach the **Aim** before you begin the next unit. If you do not reach the aim, the instructor will assist you in finding and practising the difficult areas. When you are ready, you can write a **B test** to show that you have mastered the skills.

A **Final Test** is to be written when you have finished the book. This final test will assess your skills from the whole book. You have mastered the skills in each unit and then kept using many of them throughout the course. The test reviews all those skills.

Unit 1

Number Sense

Topic A: Emotions and Learning

Emotions, or what we feel about something, play a big part in how we learn. If we are calm, we learn well. If we are afraid or stressed, we do not learn as well.

Math anxiety or the fear of math is a learned habit. If it is learned, it can be unlearned. Most math anxiety comes from bad memories while learning math.

Everyone can learn math. There is no special talent for math. There are some people who are better at math than others, but even these people had to **learn** to be good at math.

People who are good at math have learned some good skills to help them learn math. One good skill is to know your textbook.

Know Your Textbook

Look at the **Table of Contents** in the front of your textbook. It tells you what you will be learning. You can see some things that you already know, some things that you may have forgotten and some things that are new to you.

Flip the pages. You can see that the textbook is split into units. Each unit is something to learn.

Each unit has exercises to do. Notice the **answers** are at the end of the exercise. You can check your answers as soon as you are done. You can also check your answer before moving on if are not sure if you are doing the question right.

At the end of each unit is a **self-test**. It is a chance for you to see how well you have learned the skills in the unit. If you do well, you can move on. If you don't do well, you can go back and practice those skills.

Knowing your textbook gives you a good skill. If you get frustrated, you can use the **Table of Contents** to go back and find some help.

How to Deal with Math Anxiety

Anyone can feel anxiety that will slow down learning. The key to learning is to be the “boss” of your anxiety.

One way to be the “boss” is to relax. Try this breathing exercise.

Start by breathing in slowly to the count of four. It may help to close your eyes and count. Now hold your breath for four counts and then let your breath out slowly to the count of four. The counting is silent and should follow this pattern: “breathe in, two, three four; hold, two, three, four; breathe out, two, three, four; wait, two, three four.” With practice, the number of counts can be increased. This is an easy and good way to relax.

Now try this exercise quietly and repeat it five times slowly.

Each time you feel anxious about learning, use the breathing exercise to help calm yourself. Ask yourself if what you tried worked. Do you feel calmer?

Remember learning to deal with your math anxiety may take some time. It took you a long time to learn “math anxiety”, so it will take some time to overcome it.

Topic B: Place Value

Each **place** in a number has a **value**.

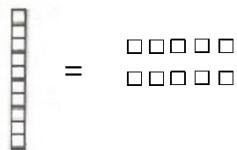

- The **ones place** tells how many ones there are.

3 means 3 ones 

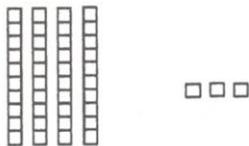

9 is the largest amount that we can express (write or say) with one digit.

- The **tens place** shows how many tens there are. The ones place must have a digit in it before there can be a digit in the tens place.

Every ten is **ten ones**.

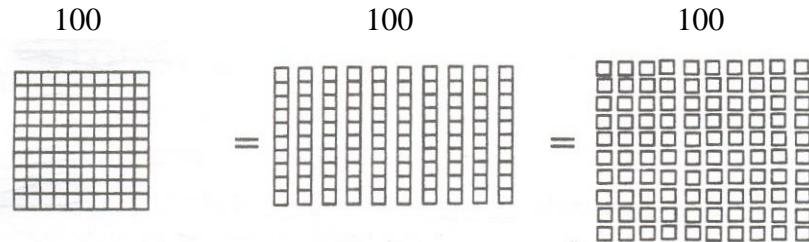

43 means 4 tens and 3 ones

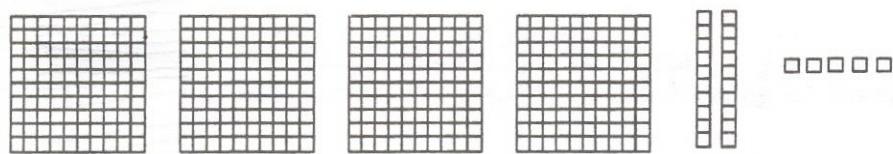

99 means 9 tens and 9 ones. 99 is the largest amount that we can express (write or say) using only two digits.

The place to the left of the tens place is the **hundreds place**. It shows how many hundreds there are. A number written using three whole digits has a hundreds place, a tens place, and a ones place.

Every hundred is **ten tens** – every hundred is the same as one hundred ones.

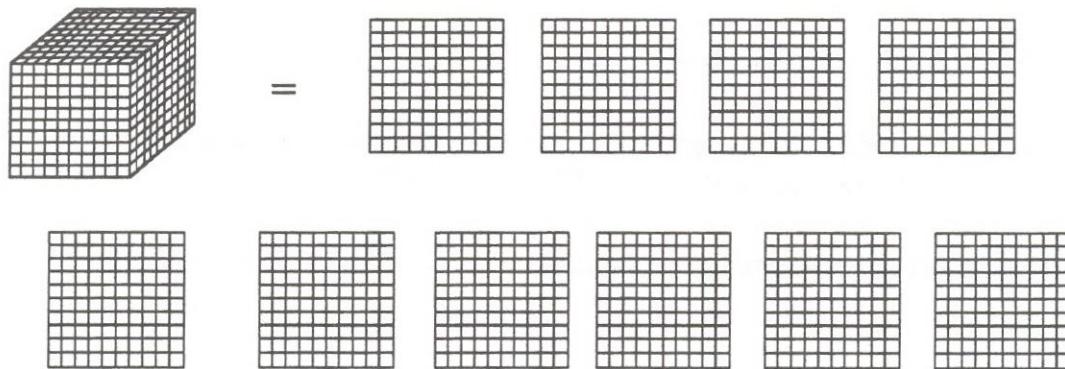

425 means 4 hundreds, 2 tens, and 5 ones.

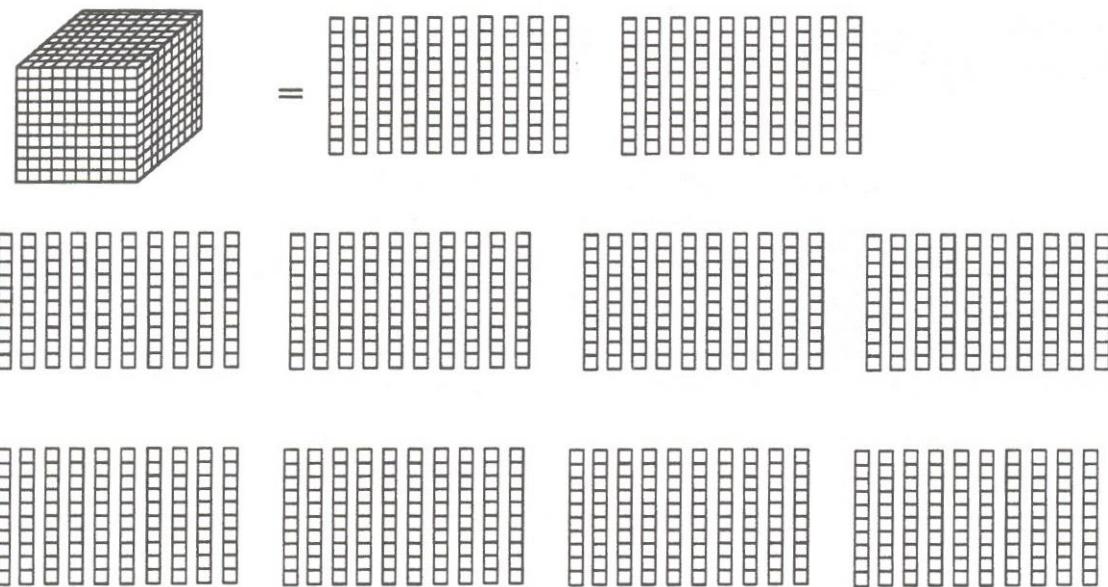

The place to the left of the hundreds place is the **thousands** place.

One thousand is the same as ten hundreds.

One thousand is the same as one hundred tens.

One thousand is the same as one thousand ones. (You will have to imagine the picture of the one thousand ones!)

When we write numerals, a little space is left between the thousands place and the hundreds place. The space makes it easier to read large numerals.

4 392

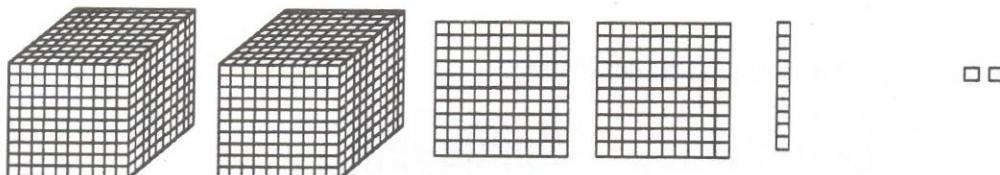

8 253

23 693

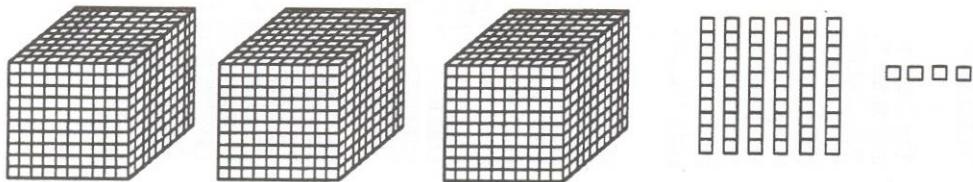

Large numerals used to be written with a comma (,) instead of a space and you may still see numerals like this: 4,392 8,253 23, 693

Learn to use the space instead of a comma because that is the preferred style.

2 212 means 2 thousands, 2 hundreds, 1 ten, and 2 ones

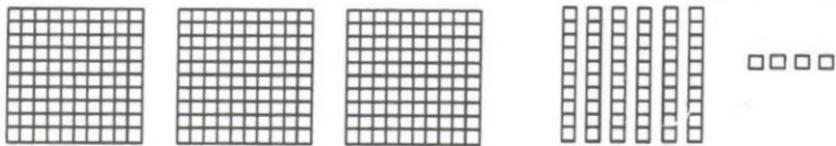

3 064 means 3 thousands, 0 hundreds, 6 tens, and 4 ones

What happens if the 0 is not written to hold the hundreds place?

The numerals would then be 364 which stands for the number
3 hundreds, 6 tens, and 4 ones.

364 is **not** the same as 3 064.

Exercise One

Fill in the blanks to make each sentence true. Draw a sketch if you wish. Check your work using the answer key at the end of the exercise.

- a) $8\ 261 =$ _____ thousands _____ hundreds _____ tens _____ ones
- b) $4\ 005 =$ _____ thousands _____ hundreds _____ tens _____ ones
- c) $2\ 931 =$ _____ thousands _____ hundreds _____ tens _____ ones
- d) $1\ 034 =$ _____ thousands _____ hundreds _____ tens _____ ones
- e) $2\ 608 =$ _____ thousands _____ hundreds _____ tens _____ ones
- f) $7\ 543 =$ _____ thousands _____ hundreds _____ tens _____ ones
- g) $2\ 900 =$ _____ thousands _____ hundreds _____ tens _____ ones

Answers to Exercise One

- | | |
|--|--|
| a) 8 thousands, 2 hundreds, 6 tens, 1 ones | b) 4 thousands, 0 hundreds, 0 tens, 5 ones |
| c) 2 thousands, 9 hundreds, 3 tens, 1 one | d) 1 thousand, 0 hundreds, 3 tens, 4 ones |
| e) 2 thousands, 6 hundreds, 0 tens, 8 ones | f) 7 thousands, 5 hundreds, 4 tens, 3 ones |
| g) 2 thousands, 9 hundreds, 0 tens 0 ones | |

The place value to the left of thousands is **ten thousands**. As you can tell by the name, one ten thousand is ten thousands. You are not going to get a sketch of these large place values because the page isn't big enough!

$43\ 692 = 4$ ten thousands, 3 thousands, 6 hundreds, 9 tens, and 2 ones

$43\ 692$ can also be thought of as 43 thousands, 6 hundreds, 9 tens, and 2 ones.

Exercise Two

Fill in the blanks. Check your work using the answer key at the end of the exercise.

a)

	ten thousands	thousands	hundreds	tens	ones
80 300	8	0	3	0	0
OR		80	3	0	0

Answers to Exercise Two

b)

	ten thousands	thousands	hundreds	tens	ones
36 981	3	6	9	8	1
OR		36	9	8	1

c)

	ten thousands	thousands	hundreds	tens	ones
31 205	3	1	2	0	5
OR		31	2	0	5

d)

	ten thousands	thousands	hundreds	tens	ones
99 999	9	9	9	9	9
OR		99	9	9	9

e)

	ten thousands	thousands	hundreds	tens	ones
15 002	1	5	0	0	2
OR		15	0	2	2

f)

	ten thousands	thousands	hundreds	tens	ones
75 125	7	5	1	2	5
OR		75	1	2	5

Have you heard the expression, “Oh, he has a 6 figure salary!” That means he earns at least one hundred thousand dollars which takes six digits to write! The place value to the left of ten thousands is **hundred thousands**. There is definitely not room on the page for a picture of this place value! Ten ten thousands makes one hundred thousand.

	hundred thousands	ten thousands	thousands	hundreds	tens	ones
432 467	4	3	2	4	6	7

	hundred thousands	ten thousands	thousands	hundreds	tens	ones
803 214	8	0	3	2	1	4

And if we look one more place to the left, the place value is **millions**. One million is 1 with six zeros after it. 1 000 000

A space is left between the millions place and the hundred thousands place.

A space is left between the thousands place and the hundreds place.

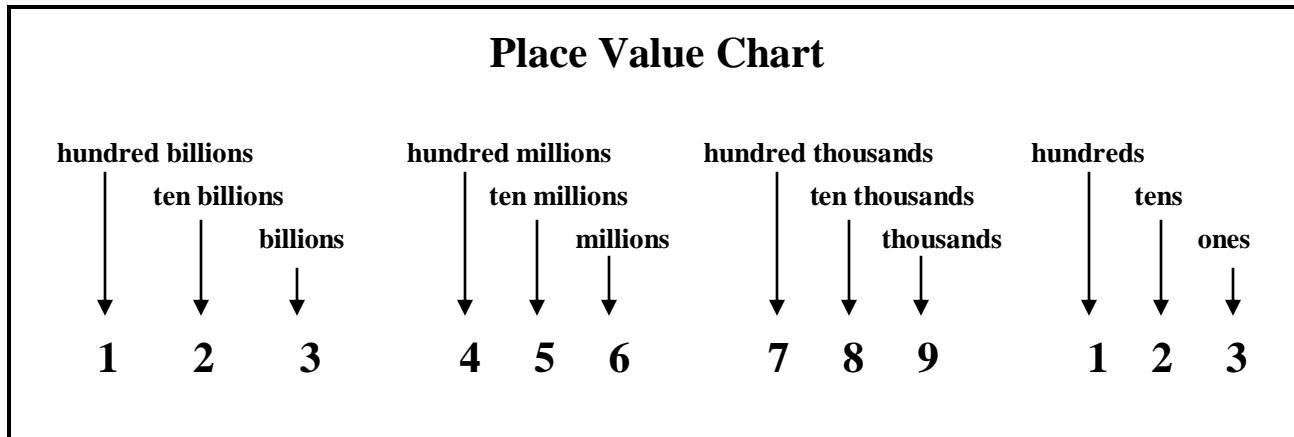

2 368 100

3 150 213

14 263 942

5 521 671

This **place value chart** may help you to remember the place values.

Notice the groups of three digits. Look at the pattern for the three places which is repeated in each **place value group** – the pattern is hundreds, tens, ones.

Our number system is called a **decimal system** because it is based on the number **ten**. *Deci* is a Latin word that means *ten*.

Whole numbers can have a decimal point (a dot) written at the end. Starting with ones, the place values are each **ten times greater**.

ones place =	one
tens place =	10 ones
hundreds place =	10 tens
thousands place =	10 hundreds
ten thousands place =	10 thousands
hundred thousands place =	10 ten thousands
millions place =	10 hundred thousands
ten millions place =	10 millions
hundred millions place =	10 ten millions

... and so on.

Our number system is very tidy. When you learn to use the metric measurement system you will see the metric system is based on ten just like the number system.

Exercise Three

Write the place value name for each underlined digit. Check your work using the answer key at the end of the exercise.

- a) 23 206 thousands b) 2 468 tens
c) 622 d) 92 002
e) 92 002 f) 14 262

Reading and Writing Numerals

You know that the **digits** are 0 1 2 3 4 5 6 7 8 9 and that digits are arranged in different places so we can count larger amounts than our ten fingers!

When we use **digits** we call what we write the **numeral**.

328 is a numeral

46 is a numeral

3 is a numeral

We use numerals to represent **numbers**.

The numerals from 1 to 12 have special words. These are

0	zero	7	seven
1	one	8	eight
2	two	9	nine
3	three	10	ten
4	four	11	eleven
5	five	12	twelve
6	six		

The numerals from 13 to 19 are

13	thirteen
14	fourteen
15	fifteen
16	sixteen
17	seventeen
18	eighteen
19	nineteen

The word names for the numbers 20 to 90 are

- | | |
|----|---------|
| 20 | twenty |
| 30 | thirty |
| 40 | forty |
| 50 | fifty |
| 60 | sixty |
| 70 | seventy |
| 80 | eighty |
| 90 | ninety |

The names for the numbers **between** groups of tens also follow a pattern. The first number tells us how many tens. The second number tells us how many ones.

	Tens Ones		Tens Ones		Tens Ones
20	twenty	30	thirty	40	forty
21	twenty-one	31	thirty-one	41	forty-one
22	twenty-two	32	thirty-two	42	forty-two
23	twenty-three	33	thirty-three	43	forty-three
24	twenty-four	34	thirty-four	44	forty-four
25	twenty-five	35	thirty-five	45	forty-five
26	twenty-six	36	thirty-six	46	forty-six
27	twenty-seven	37	thirty-seven	47	forty-seven
28	twenty-eight	38	thirty-eight	48	forty-eight
29	twenty-nine	39	thirty-nine	49	forty-nine

The written names for numbers that have tens and ones are written with a hyphen (-) between them. This pattern with the hyphen continues up to ninety-nine (99).

When we write hundreds in words, we need two words. The first word tells us **how many** hundreds. The second word tells us we are counting hundreds.

200 **two hundred**

You now know how to write numbers in words up to 999.

367 is made of	3 hundreds	6 tens	7 ones
Each is written:	three hundred	sixty	seven
Put the parts together:	three hundred sixty-seven		

Remember:

- hyphen (-) between the tens and units
- no hyphen anywhere else
- no “s” on the hundred
- no ‘and’ between the hundreds place and the tens place

Here is another example. Watch out for the empty space!

504 is made of	5 hundreds	0 tens	4 ones
Each is written:	five hundred		four
Put the parts together:	five hundred four		

Here is another example. Watch out for the empty space!

890 is made of	8 hundreds	9 tens	0 ones
Each is written:	eight hundred	ninety	
Put the parts together:	eight hundred ninety		

Here is another example. Watch out for the empty spaces!

100 is made of	1 hundreds	0 tens	0 ones
Each is written:	one hundred		
Put the parts together:	one hundred		

Remember: empty spaces are not written in words.

Large numerals are read in the place value groups of three that you noticed in the place value chart. You have been practicing reading numerals with three digits or less. Now practice reading the thousands group.

	hundred thousands	ten thousands	thousands	hundreds	tens	ones
423 796 is made of	4	2	3	7	9	6
Each is written	four hundred twenty-three thousand			seven hundred	ninety	six
Put the parts together	four hundred twenty-three thousand seven hundred ninety-six					

423 796 is four hundred twenty-three **thousand** seven hundred ninety-six

	hundred thousands	ten thousands	thousands	hundreds	tens	ones
26 201 is made of		2	6	2	0	1
Each is written	twenty-six thousand			two hundred		one
Put the parts together	twenty-six thousand two hundred one					

26 201 is twenty-six **thousand** two hundred one

	hundred thousands	ten thousands	thousands	hundreds	tens	ones
400 000 is made of	4	0	0	0	0	0
Each is written	four hundred thousand					
Put the parts together	four hundred thousand					

400 000 is four hundred **thousand**

Exercise Five

Write the word names for the numerals. Check your work using the answer key at the end of the exercise.

a)

Answers to Exercise Five

a)

	hundred thousands	ten thousands	thousands	hundreds	tens	ones
491 200 is made of	4	9	1	2	0	0
Each is written	four hundred ninety-one thousand			two hundred		
Put the parts together	four hundred ninety-one thousand two hundred					

b)

	hundred thousands	ten thousands	thousands	hundreds	tens	ones
19 631 is made of		1	9	6	3	1
Each is written	nineteen thousand			six hundred	thirty	one
Put the parts together	nineteen thousand six hundred thirty-one					

c)

	hundred thousands	ten thousands	thousands	hundreds	tens	ones
304 212 is made of	3	0	4	2	1	2
Each is written	three hundred four thousand			two hundred	twelve	
Put the parts together	three hundred four thousand two hundred twelve					

d)

	hundred thousands	ten thousands	thousands	hundreds	tens	ones
3 426 is made of			3	4	2	6
Each is written	three thousand			four hundred	twenty	six
Put the parts together	three thousand four hundred twenty-six					

e)

	hundred thousands	ten thousands	thousands	hundreds	tens	ones
218 000 is made of	2	1	8	0	0	0
Each is written	two hundred eighteen thousand					
Put the parts together	two hundred eighteen thousand					

f)

	hundred thousands	ten thousands	thousands	hundreds	tens	ones
623 009 is made of	6	2	3	0	0	9
Each is written	six hundred twenty-three thousand					nine
Put the parts together	six hundred twenty-three thousand nine					

- g) three hundred sixty-five thousand four hundred fifty-six
 h) two hundred ninety-nine thousand eight hundred ninety-nine
 i) four hundred fifty-six thousand eight hundred seventy-six
 j) nine hundred twenty-three thousand four hundred seventy-one
 k) fifty-three thousand six hundred seventy-nine

Now, just for fun, take a look at these very large numerals. Say “million” for the group to the left of the thousands group.

	millions	hundred thousands	ten thousands	thousands	hundreds	tens	ones
2 643 182 is made of	2	6	4	3	1	8	2
Each is written	two million	six hundred forty-three thousand				one hundred	eighty
Put the parts together	two million six hundred forty-three thousand one hundred eighty-two						

	millions	hundred thousands	ten thousands	thousands	hundreds	tens	ones
6 510 231 is made of	6	5	1	0	2	3	1
Each is written	six million	five hundred ten thousand			two hundred	thirty	one
Put the parts together	six million five hundred ten thousand two hundred thirty-one						

Exercise Six

Write the word names for the numerals. Check your work using the answer key at the end of the exercise.

a)

	millions	hundred thousands	ten thousands	thousands	hundreds	tens	ones
2 851 234 is made of

Exercise Eight

Write the number in each of the word problems. Check your work using the answer key at the end of the exercise.

- The Nile River in Africa is the longest river in the world. It is two thousand five hundred sixty-nine kilometers long. Write the number.
- Canada shares a border with the United States that is eight thousand eight hundred ninety-three kilometers long. Write the number.
- The distance around the Earth is forty thousand seventy-six kilometers. Write the number.

- d) The population of British Columbia in 2009 was four million four hundred fifty-five thousand two hundred seven. Write the number.
- e) The population of Canada in 1891 was three million two hundred thirty thousand. Write the number.
- f) The distance from Beijing, China to Vancouver is eight thousand five hundred thirty-six kilometers. Write the number.
- g) The distance from Toronto, Ontario to Victoria is four thousand five hundred fifty-eight kilometers. Write the number.
- h) The distance from Halifax, Nova Scotia to Vancouver is six thousand one hundred nineteen kilometers. Write the number.

Topic C: Expanded Form

When we write a number in **expanded form**, each digit is written with its place value.

Example:

	millions	hundred thousands	ten thousands	thousands	hundreds	tens	ones
598 is made of					5	9	8
Each is written					500	90	8
Expanded form	500 + 90 + 8						

Example:

	millions	hundred thousands	ten thousands	thousands	hundreds	tens	ones
1 068 is made of				1	0	6	8
Each is written				1 000		60	8
Expanded form	1 000 + 300 + 60 + 8						

Example:

	millions	hundred thousands	ten thousands	thousands	hundreds	tens	ones
243 690 is made of		2	4	3	6	9	0
Each is written		200 000	40 000	3 000	600	90	0
Expanded form	200 000 + 40 000 + 3 000 + 600 + 90						

Exercise One

Write each number in expanded form. Check your work using the answer key at the end of the exercise.

a) 329

Topic D: Ordering Numerals

In this topic you will learn to arrange **numerals** in order from smallest to largest. Sorting numbered papers such as order forms, arranging items by the date and comparing prices are examples of the ways you use this skill. First look at pairs of numerals. Look at two numerals and tell which one is larger. How do you do this?

Exercise One

Draw a box around the larger number in each pair.

a) 431 484

b) 267 251

c) 684 693

d) 274 315

e) 932 895

f) 792 810

To compare numerals, look at the place with the largest value.

Example A: Compare 1 628 and 1 599.

- thousands are the same.
 - hundreds 1 628 has 6 hundreds.
 1 599 has 5 hundreds.
- 1 628 is larger than 1 599.

Example B: Compare 13 562 and 13 612

- ten thousands are the same
 - thousands are the same
 - hundreds 13 562 has 5 hundreds
 13 612 has 6 hundreds
- 13 612 is larger than 13 562.

Example C: Compare 673 234 and 673 423

- hundred thousands are the same
- ten thousands are the same
- thousands are the same
- hundreds 673 234 has 2 hundreds
 673 423 has 4 hundreds

Note: Numerals with one digit are always less than numerals with two digits.
Numerals with two digits are always less than numerals with three digits, and so on.

9 is less than 15

87 is less than 107

999 is less than 1 001

Exercise Two

Now use the same ideas to arrange more than two numerals in order.

For example, to arrange 6, 616, 1, 66, 666, 61, and 16 in order from **smallest** to **largest**, use the following method:

- First, sort the numerals with the same number of digits into groups.

6, 1 66, 16, 61 and 616, 666

- The group of one digit numerals contains 6 and 1. As 1 is smaller than 6, the list starts with 1, then 6.
- The group of two-digit numerals contains 66, 61, and 16. Use your skills in ordering numerals to see that 16 is smallest, then 61, and 66 is the largest of this group. The list now reads, 1, 6, 16, 61, 66.
- Finally, look at the three-digit numerals, 616 and 666. As 616 is smaller than 666, it will come first. The list now reads:

1, 6, 16, 61, 66, 616, 666.

Exercise Three

Greater Than, Less Than, Equal

The sign $<$ means **is less than** (smaller than).

The sign $>$ means **is greater than** (bigger than).

The greater than and less than signs always point to the smaller number (that is, the small part of the sign is close to the small number.)

$5 < 12$ 5 is less than 12

$6 > 3$ 6 is greater than 3

The sign $=$ means **equals** and is used when two amounts are the same.

The sign \neq means **not equal to** and is used when two amounts are **not** the same.

Exercise Four

Write $<$, $>$, or $=$ in each blank as needed. Check your work using the answer key at the end of the exercise.

Topic E: Rounding Numbers

We use numbers a lot in our everyday lives. List some of the ways you use numbers.

You may have written money, shopping, time, and counting as part of your answer.

Think about time. Let's say it takes eight minutes to walk to the bus. If someone asks you how long it takes, you will probably say, "About ten minutes."

If you buy a sweater that cost \$29, you may say, "Oh, it was around thirty dollars."

How far is it from Vancouver to Prince George? The map says 796 km, but we would probably say, "About 800 kilometres."

You have just read examples of **rounding numbers**.

We round numbers for many reasons:

- We may not know the exact number.
- The exact number may not be important for what we are doing.
- We may need a **quick way to figure** something out.

When you are rounding numbers, use zeros to hold the places at the end of the number. Work through the following examples and exercises carefully. **Rounding is an important skill.**

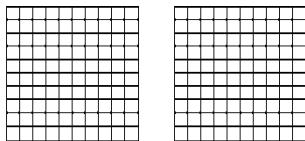

Rounding to the Nearest Hundred

A number rounded to the nearest hundred will have zeros in the ones place **and** in the tens place. The number will end with 000, 100, 200, 300, 400, 500, 600, 700, 800, or 900.

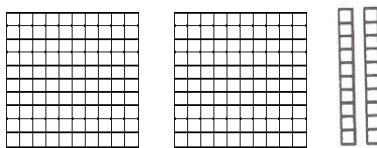

When rounding to the nearest 100, we are looking for the closest group of 100.

Example: **200, 220 and 300.**

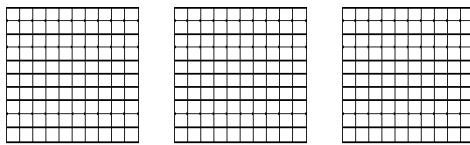

200

220

300

Is 220 closer to 200 or 300? It is closer to 200.

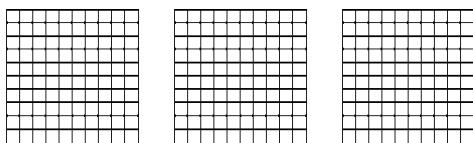

Which gives a better estimate of 220 ... 2 hundreds or 3 hundreds? **2 hundreds**

If we round 220 to nearest hundred, the result would be **200**.

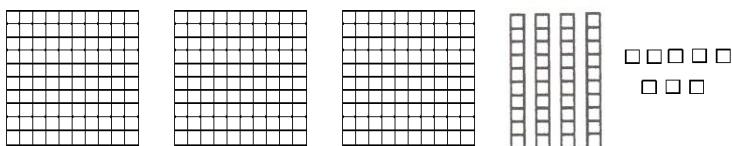

Remember: The rounded number has zeroes in the tens and ones places.

Example: **300, 348 and 400.**

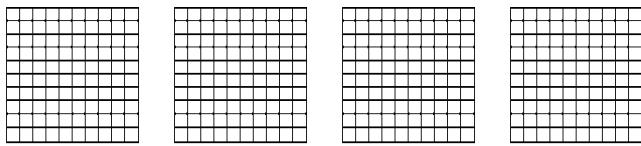

300

348

400

Is 348 closer to 300 or 400? It is closest to **300**.

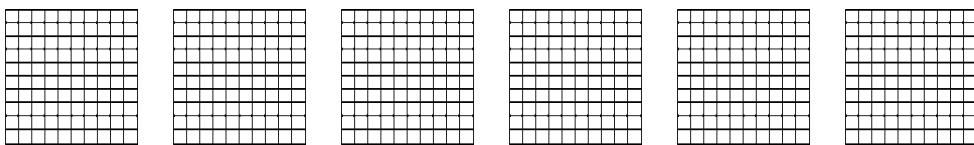

Which gives a better estimate of 3483 hundreds or 4 hundreds? **3 hundreds**

If we round 348 to the nearest 100, the result would be **300**.

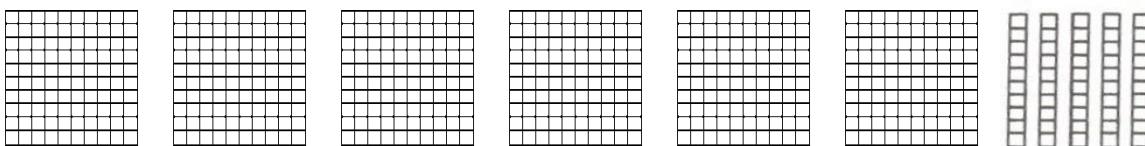

Remember: The rounded number has zeroes in the tens and ones places.

Example: **600, 650 and 700**

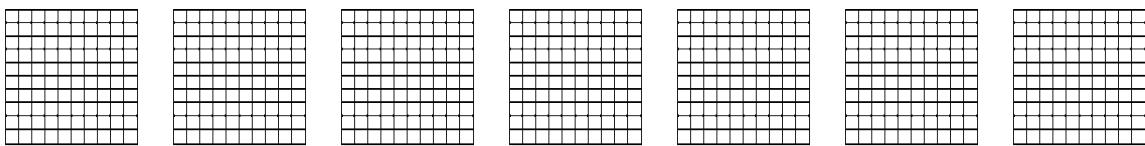

600

650

700

Is 650 closer to 600 or 700? It is closer to **700**.

Which gives a better estimate of 650..... 6 hundreds or 7 hundreds? **7 hundreds**.

If we round 650 to the nearest hundred, the result would be **700**.

When we round a number which has a 5 in the tens place, we always round up to the next hundred.

If we round 650 to nearest hundred, the result would be **700**.

Example: Round 584 to the nearest 100.

584 is between 5 hundreds and 6 hundreds.

584 is closer to 6 hundreds.

Rounded number is 600.

Exercise One

Round each number to the nearest 100. Check your work using the answer key at the end of the exercise.

a) **232** is between _____ hundreds and _____ hundreds.

232 is closest to _____ hundreds.

Rounded number is _____.

b) **647** is between _____ hundreds and _____ hundreds.

647 is closest to _____ hundreds.

Rounded number is _____.

c) **881** is between _____ hundreds and _____ hundreds.

Now look at a shorter method to round to the nearest 100.

When rounding to the nearest hundred, do this:

Step 1: Underline the hundreds place.

468

Step 2: Look at the digit following in the **tens place**.

↓
468

Step 3: If the digit in the tens place is less than 5,

- write a zero in the tens place **and** the ones place.
- leave the hundreds digit as it is.

↓
329 rounds to 300 (329 is nearer to 300 than to 400)
↓
846 rounds to 800
↓
608 rounds to 600

Step 4: If the digit in the tens place is 5 or more,

- write a zero in the tens place **and** the ones place.
- add one more hundred to the hundreds place.

↓
362 rounds to **400** (362 is nearer to 400 than to 300)
↓
852 rounds to **900**
↓
964 rounds to **1 000** (one hundred more than 9 hundreds is 10 hundreds)

Note: If you are rounding to the nearest hundred, one and two-digit numerals round like this:

the numbers from 0 to 49 round to **0**

the numbers from 50 to 99 round to **100**.

Exercise Two

Round your answer to the nearest hundred. Check your work using the answer key at the end of the exercise.

Rounding to the Nearest Thousand

A number rounded to the nearest thousand will have zeros in the ones, tens, and hundreds places. The number will end with 0 000, 1 000, 2 000, 3 000, 4 000, 5 000, 6 000, 7 000, 8 000, or 9 000.

When **rounding to the nearest thousand**, do this:

Step 1: Underline the thousands place.

4 398

Step 2: Look at the digit following in the **hundreds place**.

↓
4 398

Step 3: If the digit in the hundreds place is less than 5,

- write a zero in the hundreds place, the tens place, and the ones place.
- leave the thousands digit as it is.

↓
4 398 rounds to 4 000 (4 398 is nearer to 4 000 than to 5 000)
↓
325 263 rounds to 325 000

Step 4: If the digit in the hundreds place is 5 or more,

- write a zero in the hundreds, tens, and ones places.
- add one more thousand to the thousands place.

↓
2 884 rounds to 3 000 (2884 is nearer to 3 000 than to 2 000)
↓
86 583 rounds to **87** 000
↓
29 965 rounds to **30** 000

Note: If you are rounding to the nearest thousand, one, two, and three-digit numerals round like this:

numerals from 0 to 499 round to **0**

numerals from 500 to 999 round to **1 000**.

Rounding to the Nearest Ten Thousand

A number rounded to the nearest ten thousand will have zeros in the ones, tens, hundreds and thousands places. The number will end with 0 000, 10 000, 20 000, 30 000, 40 000, 50 000, 60 000, 70 000, 80 000, or 90 000.

When **rounding to the nearest ten thousand**, do this:

Step 1: Underline the ten thousands place.

42 398

Step 2: Look at the digit following in the **thousands place**.

↓
42 398

Step 3: If the digit in the thousands place is less than 5,

- write a zero in the thousands place, the hundreds place, the tens place, and the ones place.
- leave the ten thousands digit as it is.

42 398 rounds to 40 000 (42 398 is nearer to 40 000 than to 50 000)
↓
253 263 rounds to 250 000

Step 4: If the digit in the thousands place is 5 or more,

- write a zero in the thousands, hundreds, tens, and ones places.
- add one more thousand to the thousands place.

↓
28 884 rounds to 29 000 (28 884 is nearer to 29 000 than to 28 000)
↓

↓
299 965 rounds to 300 000

Note: If you are rounding to the nearest ten thousand, one, two, three and four-digit numerals round like this:

numerals from 0 to 4 999 round to **0**

numerals from 5 000 to 9 999 round to **10 000**.

CONGRATULATIONS!!

Now you have finished Unit 1.

TEST TIME!

Ask your instructor for the Practice Test for this unit.

Once you've done the practice test,

you need to do the unit 1 test.

Again, ask your instructor for this.

Good luck!

Unit 2

Addition

Topic A: Addition

Addition puts amounts together. The answer of addition is called the **sum** or the **total**.

The **plus sign** + means to add.

$$\diamond \diamond \diamond + \diamond \diamond = \diamond \diamond \diamond \diamond$$

$$3 + 2 = 5 \quad \text{says three plus two equals five}$$

or three and two is five

The **sum** is 5.

Exercise One

Check out your **addition facts** by doing this exercise as quickly as possible without counting. The highest **total** or **sum** (what the numbers add up to) for these number facts is 20. Check your work using the answer key at the end of the exercise. Then, make a list of any addition facts you do not know or which are slow – practice them. If you feel you need more practice, see your instructor.

Addition of Larger Numbers

Use these steps to complete each addition question.

Step 1: Add the ones to the ones.

Step 2: Add the tens to the tens.

Step 3: Add the hundreds to the hundreds.

Step 4: Add the thousands to the thousands.

Step 5: Add the ten thousands to the ten thousands.

Etc.

Example A:

$$\begin{array}{r} 23 \\ + 56 \\ \hline \end{array}$$

Step 1: Add the ones to the ones. 3 ones + 6 ones = 9 ones

$$\begin{array}{r} 23 \\ + 56 \\ \hline 9 \end{array}$$

Write the answer in line with the ones in the question.

Step 2: Add the tens. 2 tens + 5 tens = 7 tens

$$\begin{array}{r} 23 \\ + 56 \\ \hline 79 \end{array}$$

The sum of $23 + 56 = 79$

To add three or more numbers together, use the following steps.

Step 1: Add the ones to the ones.

Step 2: Add the tens to the tens.

Step 3: Add the hundreds to the hundreds.

Step 4: Add the thousands to the thousands.

Step 5: Add the ten thousands to the ten thousands.

Example A:

$$\begin{array}{r} 24 \\ 52 \\ + 73 \\ \hline \end{array}$$

Step 1: Add the ones. 4 ones + 2 ones + 3 ones = 9 ones

$$\begin{array}{r} 24 \\ 52 \\ + 73 \\ \hline 9 \end{array}$$

Step 2: Add the tens. 2 tens + 5 tens + 7 ten = 14 tens

$$\begin{array}{r} 24 \\ 52 \\ + 73 \\ \hline 149 \end{array}$$

Use these steps to complete each addition question.

Step 1: Add the ones to the ones.

Step 2: Add the tens to the tens.

Step 3: Add the hundreds to the hundreds.

Example A:

$$\begin{array}{r} 372 \\ +415 \\ \hline \end{array}$$

Step 1: Add the ones. 2 ones + 5 ones = 7 ones

$$\begin{array}{r} 372 \\ +415 \\ \hline 7 \end{array}$$

Step 2: Add the tens. 7 tens + 1 ten = 8 tens

$$\begin{array}{r} 372 \\ +415 \\ \hline 87 \end{array}$$

Step 3: Add the hundreds. 3 hundreds + 4 hundreds = 7 hundreds

$$\begin{array}{r} 372 \\ +415 \\ \hline 787 \end{array}$$

To add three or more numbers together, use the following steps.

Step 1: Add the ones to the ones.

Step 2: Add the tens to the tens.

Step 3: Add the hundreds to the hundreds.

Example A:

$$\begin{array}{r} 372 \\ 415 \\ + 210 \\ \hline \end{array}$$

Step 1: Add the ones. 2 ones + 5 ones + 0 ones = 7 ones

$$\begin{array}{r} 372 \\ 415 \\ + 210 \\ \hline 7 \end{array}$$

Step 2: Add the tens. 7 tens + 1 ten + 1 ten = 9 tens

$$\begin{array}{r} 372 \\ 415 \\ + 210 \\ \hline 97 \end{array}$$

Step 3: Add the hundreds.

3 hundreds + 4 hundreds + 2 hundreds = 9 hundreds

$$\begin{array}{r} 372 \\ 415 \\ + 210 \\ \hline 997 \end{array}$$

Some people like to check their addition by adding a second time, starting with the bottom number instead of the top number. For example,

$$\begin{array}{r} 63 \\ +35 \\ \hline 98 \end{array}$$

Add: $3 + 5 = 8$
 $6 + 3 = 9$

Check: $5 + 3 = 8$
 $3 + 6 = 9$

Exercise Fifteen

Find the sums. Check your addition a second time by starting at the bottom. Place a check mark (\checkmark) beside your answer after you have added from the bottom to the top. Check your work using the answer key at the end of the exercise.

If an addition question is written with the numbers side by side, rewrite the question in columns. Put the ones under the ones, the tens under the tens, the hundreds under the hundreds, and so on.

Example A: $263 + 25 =$ _____

$$\begin{array}{r} 263 \\ + 25 \\ \hline 288 \end{array}$$

Example B: $316 + 9\,560 =$ _____

$$\begin{array}{r} 316 \\ + 9\,560 \\ \hline 9\,876 \end{array}$$

Exercise Sixteen

Rewrite each question in columns and find the total. Check your work using the answer key at the end of the exercise.

Topic B: Addition with Carrying

When the digits of one column add up to a two digit number (10 or more), you must **carry** the digit to the next column.

Example A:
$$\begin{array}{r} 27 \\ + 55 \\ \hline \end{array}$$

$$\begin{array}{r} ^127 \\ + 55 \\ \hline 2 \end{array}$$

$$\begin{array}{r} ^127 \\ + 55 \\ \hline 82 \end{array}$$

Step 1: Add the ones. 7 ones + 5 ones = 12 ones

Rename 12 ones as 1 ten and 2 ones. Write the 2 ones under the ones column and **carry** the ten to be added with the tens column.

Step 2: Add the tens. 1 ten + 2 tens + 5 tens = 8 tens

Example B:
$$\begin{array}{r} 58 \\ + 76 \\ \hline \end{array}$$

$$\begin{array}{r} ^158 \\ + 76 \\ \hline \end{array}$$

$$\begin{array}{r} ^158 \\ + 76 \\ \hline 4 \quad 134 \end{array}$$

Step 1: Add the one. 8 ones + 6 ones = 14 ones

Rename the 14 ones as **1** ten and **4** ones.

Write the 4 ones under the ones column and **carry** the ten to be added with the tens column.

Step 2: Add the tens. 1 ten + 5 tens + 7 tens = 13 tens

The 1 hundred can just be written in the sum because there are no other hundreds to add it to.

Need some extra practice? Who's the Pig? A Game of Chance.

- This game is played by two people with one set of dice. Ask your instructor for one set of dice.
- The first player to reach 100 or more points is the winner.
- Players take turns rolling the dice.
- You add the amounts on the dice to find your score.
- When it is your turn, you may roll as many times in a row as you like. Therefore, it is possible to score 100 or more points in one turn.
- However, during your turn if you roll a 1 on either die, you lose all your points for that turn, and your turn is over.
- If you roll a 1 on both dice, you lose all the points you have, and you have to start all over again at zero, and your turn is over.

Example C:

45	$\begin{array}{r} 2 \\ 45 \end{array}$	$\begin{array}{r} 2 \\ 45 \end{array}$
37	$\begin{array}{r} 37 \\ + 69 \\ \hline 1 \end{array}$	$\begin{array}{r} 37 \\ + 69 \\ \hline 151 \end{array}$
<u>+ 69</u>	<u>$+ 69$</u>	<u>$+ 69$</u>

Step 1: Add the ones. 5 ones + 7 ones + 9 ones = 21 ones

Rename 21 ones as 2 tens and 1 one.

Write the one in the sum under the ones column and **carry** the 2 tens to the tens column.

Step 2: Add the tens. 2 tens + 4 tens + 3 tens + 6 tens = 15 tens
15 tens is 1 hundred and 5 tens.

The one hundred can just be written in the sum because there are no other hundreds to add it to.

Use the same method for “carrying” when you add the columns of tens, hundreds, thousands, ten thousands, and so on. Look at these examples:

Example A:

$$\begin{array}{r} 374 \\ + 438 \\ \hline 812 \end{array}$$

Step 1: Add the ones.

$$4 \text{ ones} + 8 \text{ ones} = \mathbf{12 \ ones} = 1 \text{ ten and } 2 \text{ ones}$$

Write the **2** ones in the sum. Carry the 1 ten to the tens column.

Step 2: Add the tens.

$$7 + 3 + 1 \text{ ten you carried} = \mathbf{11 \ tens} = 1 \text{ hundred and } 1 \text{ ten}$$

Write the **1** ten. Carry the 1 hundred to the hundreds column.

Step 3: Add the hundreds.

$$3 + 4 + 1 \text{ hundred you carried} = \mathbf{8 \ hundreds}. \text{ Write } \mathbf{8}.$$

Example B:

$$\begin{array}{r} 4974 \\ 2385 \\ + 6890 \\ \hline 14249 \end{array}$$

Step 1: Add the ones. **9 ones** (write **9 ones** in the sum)

Step 2: Add the tens. **24 tens** = 2 hundreds + 4 tens (write **4** tens)

Carry the 2 hundreds to the hundreds column.

Step 3: Add the hundreds and the 2 hundreds you carried.

$$\mathbf{22 \ hundreds} = 2 \text{ thousands} + 2 \text{ hundreds} \text{ (write } \mathbf{2} \text{ hundreds)}$$

Step 4: Add the thousands and the 2 thousands you carried.

$$\mathbf{14 \ thousands} = 1 \text{ ten thousand} + 4 \text{ thousands}$$

Write **14** thousands in the sum.

Example C: 246 476
$$\begin{array}{r} & \overset{1}{\cancel{1}} & \overset{1}{\cancel{1}} & \overset{1}{\cancel{1}} \\ 246 & 476 & & \\ + 873 & 706 & & \\ \hline 1 & 120 & 182 & \end{array}$$

Step 1: Add the ones. **12 ones** = 1 ten + 2 ones

Write **2** ones in the sum, carry the 1 ten over.

Step 2: Add the tens. **8 tens**

Write **8** tens in the sum, nothing to carry.

Step 3: Add the hundreds. **11 hundreds** = 1 thousand + 1 hundred

Write **1** hundred in the sum, carry the 1 thousand.

Step 4: Add the thousands. **10 thousands** = 1 ten thousand + 0 thousands

Be sure to write the **0** to hold the thousands place in the sum.

Carry the 1 ten thousand.

Step 5: Add the ten thousands.

12 ten thousands = 1 hundred thousand + 2 ten thousands

Write the **2** ten thousands in the sum, carry the 1 hundred thousand.

Step 6: Add the hundred thousands.

11 hundred thousands = 1 million + 1 hundred thousand

Write **1** million and the **1** hundred thousand in the sum.

And to read the answer, say,

“one million, one hundred twenty thousand, one hundred eight-two”.

If you are having any problems with this work, ask your instructor to check your method of addition with carrying before you go any further.

If you feel that you need more practice, your instructor will give you more addition questions to do.

Adding Across

If an addition question is written with the numbers side by side, rewrite the question in columns. Put the ones under the ones, the tens under the tens, the hundreds under the hundreds, and so on.

Example A: $263 + 25 =$ _____

$$\begin{array}{r} 263 \\ + 25 \\ \hline 288 \end{array}$$

Example B: $316 + 9\,560 =$ _____

$$\begin{array}{r} 316 \\ + 9\,560 \\ \hline 9\,876 \end{array}$$

Exercise Eight

Rewrite each question in columns. Be careful to write ones under ones, tens under tens, hundreds under hundreds, and so on. Check your work using the answer key at the end of the exercise.

a) $476 + 392 + 483 =$ _____

b) $986 + 483 + 524 =$ _____

c) $3\,714 + 3\,189 + 4\,582 =$ _____

d) $466 + 5\,973 + 821 + 83 =$ _____

e) $697 + 7\,639 + 27 + 5\,396 =$ _____

f) $1\ 436 + 844 + 16\ 009 = \underline{\hspace{2cm}}$

g) $242\ 100 + 62\ 418 + 32 + 528\ 002 = \underline{\hspace{2cm}}$

Topic C: Estimating Answers in Addition

You have learned how to round numbers. Now you can use that skill to quickly find an **approximate** sum.

Often an estimate is all you need. If you are going away for the weekend, you have to think about how much money you will need.

The hotel is about \$60, meals about \$80, gas about \$40, and entertainment about \$100.
You will take $\$60 + \$80 + \$40 + \$100 = \$280$

When you are solving word problems or working with a calculator, **you should estimate your answer first so you can tell if your answer is sensible.**

In these examples, **estimate** the answer. Round each number **BEFORE** you add.

Example A:	53	rounds to	50
	69	rounds to	70
	22	rounds to	20
	<u>+ 88</u>	rounds to	<u>+ 90</u>
			230

Example B:	349	rounds to	300
	<u>+ 682</u>	rounds to	<u>+ 700</u>
			1 000

Example C:	43 928	rounds to	40 000
	29 785	rounds to	30 000
	88 319	rounds to	90 000
	<u>+ 243 928</u>	rounds to	<u>+ 240 000</u>
			400 000

If you are estimating an answer, usually you **estimate to the largest place value that you can**. Your estimate will give you what is sometimes called a **ballpark** figure. You will have an **approximate answer**.

Estimating Answers in Addition Word Problems

When you are solving word problems, **an estimate tells you if your answer is sensible.** You can use your estimate to help you check your answers. If your answer and the estimate are not close, then you know that you should add your numbers again.

Exercise Two

Estimate the following answers. Be sure to round to the largest place value possible before adding. Remember to **circle** the information and **underline** what is being asked. Check your work using the answer key at the end of the exercise.

Example:

During one month, Chaska spends 11 432 minutes sleeping and 5 812 minutes eating. Estimate how much time he spends sleeping and eating.

During one month, Chaska spends **11 432 minutes** sleeping and **5 812 minutes** eating. **Estimate how much time** he spends sleeping and eating?

$$\begin{array}{r} 11\ 432 \\ +\ 5\ 812 \\ \hline \end{array}$$

Estimate:

$$\begin{array}{r} 11\ 000 \\ +\ 6\ 000 \\ \hline 17\ 000 \end{array}$$

Chaska spent about 17 000 minutes sleeping and eating.

- a) During October, Amul drove 674 kilometres, 493 kilometres, 384 kilometres and 914 kilometres. Estimate the total kilometres Amul drove.

- b) The number of passengers using the ABE Taxi Company for the past three weeks were 3 205 passengers, 3 542 passengers and 2 821 passengers. Estimate the number of passengers that used the ABE Taxi Company.
- c) In 2008, the top three winning teams in the NHL were the Montreal Canadiens winning 2 980 games, the Boston Bruins winning 2 669 games and the Toronto Maple Leafs winning 2 535 games. Estimate the total number of games won by these three teams.
- d) The three deepest lakes in the world are Baikal Lake which is 1 741 metres, Tanganyika Lake which is 1 471 metres and the Caspian Sea which 1 025 metres. Estimate the total depth of the three lakes.

- e) The Wang family drove 13 527 kilometres. The Li family drove 15 439 kilometres. The Zhang family drove 17 024 kilometres. Estimate the total kilometres driven by the three families.
- f) Indonesia has 884 950 square kilometres of forest. Peru has 687 420 square kilometres of forest. India has 677 010 square kilometres of forest. Estimate the total square kilometres of forest for these three countries.
- g) Four astronauts have logged the following times in actual space travel: 4 216 minutes, 13 628 minutes, 3 153 minutes and 22 117 minutes. Estimate the total number of minutes logged by these four astronauts.

- h) In 1910, the population of London, England was 6 580 616. The population of Paris, France was 2 763 393. The population of Tokyo, Japan was 2 186 079. Estimate the total population of the three countries.

Answers to Exercise Two

- a) $700 + 500 + 400 + 900 = 2\ 500$ kilometres
- b) $3\ 000 + 4\ 000 + 3\ 000 = 10\ 000$ passengers
- c) $3\ 000 + 3\ 000 + 3\ 000 = 9\ 000$ games
- d) $2\ 000 + 1\ 000 + 1\ 000 = 4\ 000$ metres
- e) $10\ 000 + 20\ 000 + 20\ 000 = 50\ 000$ kilometres
- f) $900\ 000 + 700\ 000 + 700\ 000 = 2\ 300\ 000$ square kilometres
- g) $4\ 000 + 14\ 000 + 3\ 000 + 22\ 000 = 43\ 000$ minutes
- h) $7\ 000\ 000 + 3\ 000\ 000 + 2\ 000\ 000 = 12\ 000\ 000$ people

CONGRATULATIONS!!

Now you have finished Unit 2.

TEST TIME!

Ask your instructor for the Practice Test for this unit.

Once you've done the practice test,

you need to do the unit 2 test.

Again, ask your instructor for this.

Good luck!

Unit 3

Subtraction

Topic A: Subtraction

Subtraction takes an amount **away** from another amount. The result of subtraction is called the **difference**.

The **minus sign** — means to subtract.

$$\begin{array}{r} \diamond \diamond \diamond \diamond \diamond \diamond \cancel{\diamond} \cancel{\diamond} \cancel{\diamond} \\ 9 - 3 = 6 \end{array}$$

This says nine minus three equals six **or** nine take away three is six.

The **difference** between 9 and 3 is 6.

Subtraction is the opposite of addition. Look at the examples:

$$\begin{array}{rcl} 5 + 4 = 9 & 9 - 4 = 5 & \begin{array}{r} 8 \\ + 3 \\ \hline 11 \end{array} \\ 4 + 5 = 9 & 9 - 5 = 4 & \begin{array}{r} 11 \\ - 3 \\ \hline 8 \end{array} \\ \\ \begin{array}{r} 3 \\ + 8 \\ \hline 11 \end{array} & \begin{array}{r} 11 \\ - 8 \\ \hline 3 \end{array} & \end{array}$$

Subtraction facts are a tool that you use to do subtraction questions.

Exercise One

Check out your **subtraction facts** by doing this exercise as quickly as you can. Use your addition facts to help find the subtraction facts. Check your work using the answer key at the end of the exercise. Then, make a list of any subtraction facts you do not know or are tricky for you - practice them.

Topic B: Subtraction of Larger Numbers

You can find the difference between two large numbers using the subtraction facts you have been practicing. Always **take away** or subtract the **number after the minus sign**.

Use these steps to complete each subtraction question.

Step 1: Subtract the ones from the ones.

Step 2: Subtract the tens from the tens.

Step 3: Subtract the hundreds from the hundreds.

Step 4: Subtract the thousands from the thousands.

Step 5: Subtract the ten thousands from the ten thousands and so on.

Example A:

$$\begin{array}{r} 57 \\ - 26 \\ \hline 1 \end{array}$$

$$\begin{array}{r} 57 \\ - 26 \\ \hline 1 \end{array}$$

$$\begin{array}{r} 57 \\ - 26 \\ \hline 31 \end{array}$$

Step 1: Subtract the ones from the ones. 7 ones – 6 ones = 1 one

Write the answer in line with the ones in the question.

Step 2: Subtract the tens from the tens. 5 tens – 2 tens = 3 tens

The **difference** between 57 and 26 is **31**.

Exercise One

Find the differences. Check your work using the answer key at the end of the exercise.

Checking Subtraction

You can check your subtraction. Add the **answer** (the **difference**) to the number you took away (the second number). If your subtracting was correct, the result of the adding will be the number you started with (the top number) in the subtraction question.

Example A:

$$\begin{array}{r} 928 \\ - 416 \\ \hline 512 \end{array} \quad \text{difference}$$

To check, add 512 to 416.

$$\begin{array}{r} 512 \\ + 416 \\ \hline 928 \end{array} \quad \checkmark$$

Exercise Two

Find the differences. Check your work by adding and then by using the answer key at the end of the exercise.

a) $\begin{array}{r} 87 \\ - 36 \\ \hline \end{array}$

b) $\begin{array}{r} 29 \\ - 21 \\ \hline \end{array}$

c) $\begin{array}{r} 48 \\ - 40 \\ \hline \end{array}$

d) $\begin{array}{r} 99 \\ - 63 \\ \hline \end{array}$

e) $\begin{array}{r} 75 \\ - 45 \\ \hline \end{array}$

f) $\begin{array}{r} 73 \\ - 20 \\ \hline \end{array}$

Use these steps to complete each subtraction question:

Example B:

$$\begin{array}{r} 696 \\ - 251 \\ \hline \end{array}$$

Step 1: Subtract the ones from the ones. 6 ones — 1 one = 5 ones

$$\begin{array}{r} 696 \\ - 251 \\ \hline 5 \end{array}$$

Step 2: Subtract the tens from the tens. 9 tens — 5 tens = 4 tens

$$\begin{array}{r} 696 \\ - 251 \\ \hline 45 \end{array}$$

Step 3: Subtract the hundreds from the hundreds.

6 hundreds — 2 hundreds = 4 hundreds

$$\begin{array}{r} 696 \\ - 251 \\ \hline 445 \end{array}$$

The **difference** between 696 and 251 is **445**.

Use these steps to complete each subtraction question:

Example B:

$$\begin{array}{r} 4\ 628 \\ - \underline{2\ 604} \\ \hline \end{array}$$

Step 1: Subtract the ones from the ones. 8 ones – 4 ones = 4 ones

$$\begin{array}{r} 4\ 628 \\ - \underline{2\ 604} \\ \hline \quad \quad \quad 4 \end{array}$$

Step 2: Subtract the tens from the tens. 2 tens – 0 tens = 2 tens

$$\begin{array}{r} 4\ 628 \\ - \underline{2\ 604} \\ \hline \quad \quad \quad 24 \end{array}$$

Step 3: Subtract the hundreds from the hundreds.

6 hundreds – 6 hundreds = 0 hundreds

The **0** must be placed in the answer to hold the hundreds place.

$$\begin{array}{r} 4\ 628 \\ - \underline{2\ 604} \\ \hline \quad \quad \quad 024 \end{array}$$

Step 4: Subtract the thousands from the thousands.

4 thousands – 2 thousands = 2 thousands

$$\begin{array}{r} 4\ 628 \\ - \underline{2\ 604} \\ \hline \quad \quad \quad 2\ 024 \end{array}$$

The **difference** between 4 628 and 2 604 is **2 024**.

Example C:

$$\begin{array}{r} 79\ 486 \\ -42\ 104 \\ \hline \end{array}$$

Step 1: Subtract the ones from the ones. 6 ones — 4 ones = 2 ones

$$\begin{array}{r} 79\ 486 \\ -42\ 104 \\ \hline 2 \end{array}$$

Step 2: Subtract the tens from the tens. 8 tens — 0 tens = 8 tens

$$\begin{array}{r} 79\ 486 \\ -42\ 104 \\ \hline 82 \end{array}$$

Step 3: Subtract the hundreds from the hundreds.

$$4 \text{ hundreds} - 1 \text{ hundreds} = 3 \text{ hundreds}$$

$$\begin{array}{r} 79\ 486 \\ -42\ 104 \\ \hline 382 \end{array}$$

Step 4: Subtract the thousands from the thousands.

$$9 \text{ thousands} - 2 \text{ thousands} = 7 \text{ thousands}$$

$$\begin{array}{r} 79\ 486 \\ -42\ 104 \\ \hline 7\ 382 \end{array}$$

Step 5: Subtract the ten thousands from the ten thousands.

$$7 \text{ ten thousands} - 4 \text{ ten thousands} = 3 \text{ ten thousands}$$

$$\begin{array}{r} 79\ 486 \\ -42\ 104 \\ \hline 37\ 782 \end{array}$$

The **difference** between 79 486 and 42 104 is **37 382**.

If a subtraction question is written with the numbers side by side, rewrite the question in columns. Put the ones under the ones, the tens under the tens, the hundreds under the hundreds, and so on. The **first** number is always the top number and the **second** number is always written **below** the first number.

Example A: $687 - 52 = \underline{\hspace{2cm}}$

$$\begin{array}{r} 687 \\ - 52 \\ \hline 635 \end{array}$$

Example B: $9\ 756 - 420 = \underline{\hspace{2cm}}$

$$\begin{array}{r} 9\ 756 \\ - 420 \\ \hline 9\ 336 \end{array}$$

Exercise Ten

Topic C: Renaming

When you subtract, you may need to **rename**. Renaming means changing from one place value to another.

For example:

- 1 ten can be renamed as 10 ones
- 1 hundred can be renamed as 10 tens
- 1 thousand can be renamed as 10 hundreds.

Renaming is an important part of subtracting. Sometimes the digit on top is smaller than the digit you are subtracting. This means that you will have to rename before you can subtract. This is also called **borrowing**.

Example A: 293

2 hundreds, 9 tens, 3 ones
renamed 2 hundreds, **8 tens, 13 ones**
You borrow 1 ten. The 1 ten is renamed as 10 ones.
10 ones + 3 ones = 13 ones

Example B: 3 782

3 thousands, 7 hundreds, 8 tens, 2 ones
Renamed 3 thousands, **6 hundreds, 18 tens**, 2 ones
You borrow 1 hundred. The 1 hundred is renamed as 10 tens.
10 tens + 8 tens = 18 tens

Sometimes there is a zero in the place where you want to borrow from. You will need to move one more place value to the **left** and borrow from there.

Example A: 203

2 hundreds, 0 tens, 3 ones

renamed **1 hundreds, 10 tens, 3 ones**

You borrow 1 hundred. The 1 hundred is renamed as 10 tens.

1 hundred, 9 tens, 13 ones

Then, you borrow 1 ten. The 1 ten is renamed as 10 ones.

10 ones + 3 ones = 13 ones

Example B: 30 782

3 ten thousands, 0 thousands, 7 hundreds, 8 tens, 2 ones

renamed **2 ten thousands, 10 thousands, 7 hundreds, 8 tens, 2 ones**

You borrow 1 ten thousand. The 1 ten thousand is renamed as 10 thousands.

2 ten thousands, 9 thousands, 17 hundreds, 8 tens, 2 ones

Then, you borrow 1 thousand. The 1 thousand is renamed as 10 hundreds.

10 hundreds + 7 hundreds = 17 hundreds

Need more practice?

Ask your instructor for some play money. Using the one, ten, hundred, thousand, ten thousand and hundred thousand dollar bills, practice trading one of one type of bill for ten of the lesser place value.

Topic D: Subtraction with Borrowing

When you subtract, the digit that you are taking away may be larger than the top digit in that same column. You must **borrow** from the column on the left. First, let's look at two examples using the place value shapes.

Example A: 243
 - 128

2 hundreds

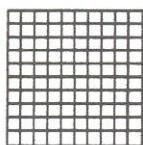

4 tens

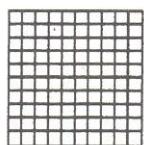

3 ones

Step 1: 3 ones – 8 ones cannot be done

Borrow one ten and rename it as ten ones. Add the ten ones to the three ones.

2 hundreds

3 tens 13 ones

Now you can subtract: **13 ones** - 8 ones = 5 ones

Step 2: Subtract the tens. **3 tens** – 2 tens = 1 ten

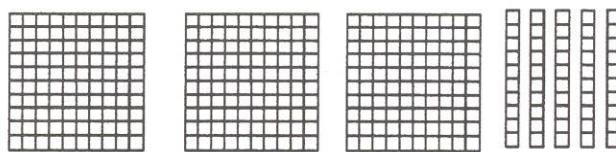

Step 3: Subtract the hundreds. 2 hundreds – 1 hundred = 1 hundred

Here is the question using numerals.

$$\begin{array}{r} 3 \ 13 \\ 2 \cancel{4} \ 3 \\ - 128 \\ \hline 115 \end{array}$$

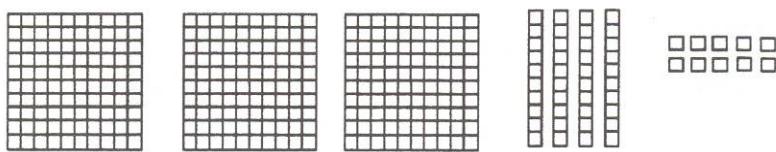

Example B: 350

$$\underline{- 124}$$

Step 1: 0 ones – 4 ones cannot be done

Borrow one ten and rename it as ten ones.

$$\mathbf{10 \ ones - 4 \ ones = 6 \ ones}$$

Step 2: 4 tens – 2 tens = 2 tens

Step 3: 3 hundreds – 1 hundred = 2 hundreds

This is how the question looks using numerals.

$$\begin{array}{r} 4 \ 10 \\ 3\cancel{5}0 \\ - 124 \\ \hline 226 \end{array}$$

To check your subtraction, add the **answer** (the **difference**) to the number you took away. If your subtracting was correct, the result of the adding will equal the number you started with in the subtraction question.

Example A:

$$\begin{array}{r} 726 \\ - 317 \\ \hline 409 \end{array} \quad \text{difference}$$

To check, add 409 to 317.

$$\begin{array}{r} 409 \\ + 317 \\ \hline 726 \end{array} \quad \checkmark$$

Exercise Three

You may need to borrow 1 ten and rename it as 10 ones to do these subtractions. Use the method for checking your answer beside each question. Check your work using the answer key at the end of the exercise.

a)
$$\begin{array}{r} 42 \\ - 5 \\ \hline 37 \end{array}$$
 Check:
$$\begin{array}{r} 37 \\ + 5 \\ \hline 42 \end{array}$$
 ✓ b)
$$\begin{array}{r} 83 \\ - 6 \\ \hline \end{array}$$
 Check:

c)
$$\begin{array}{r} 91 \\ - 7 \\ \hline \end{array}$$
 Check: d)
$$\begin{array}{r} 70 \\ - 4 \\ \hline \end{array}$$
 Check:

e)

Use this same method of **borrowing** when you subtract the hundreds, thousands, ten thousands, and so on. Look at the place value shapes as you work through these examples.

Example A:

$$\begin{array}{r} 225 \\ - 162 \\ \hline \end{array}$$

2 hundreds

2 tens

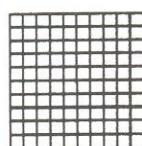

5 ones

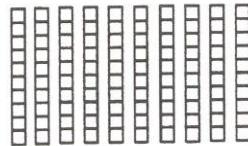

Step 1: 5 ones – 2 ones = 3 ones

Step 2: 2 tens – 6 tens (can't be done)

Borrow one hundred and rename it as 10 tens which you add onto the 2 tens.

1 hundred

12 tens

3 ones left

12 tens – 6 tens = 6 tens

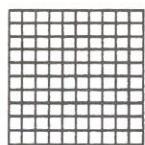

Step 3: 1 hundred – 1 hundred = 0 hundreds

Note: The 0 in the hundreds is not needed in the answer (063) because it is the first digit and does not have to hold the place.

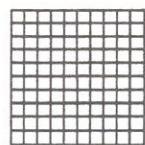

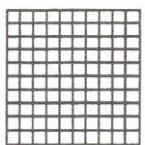

$$\begin{array}{r} 112 \\ 225 \\ - 162 \\ \hline 63 \end{array}$$

Example B:

$$\begin{array}{r} 331 \\ - 145 \\ \hline \end{array}$$

3 hundreds

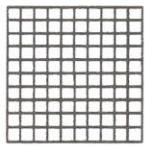

3 tens

□

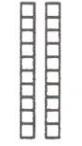

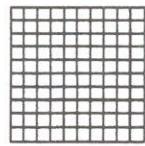

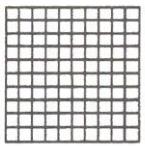

1 one

Step 1: $1 \text{ one} - 5 \text{ ones}$ (can't be done)

Borrow 1 ten and rename it as 10 ones which you add onto the 1 one.

3 hundreds

2 tens

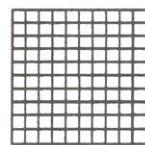

11 ones

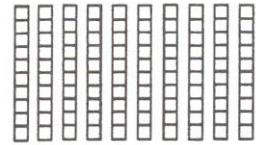

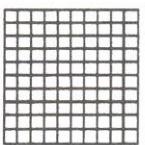

$$11 \text{ ones} - 5 \text{ ones} = 6 \text{ ones}$$

Step 2: $2 \text{ tens} - 4 \text{ tens}$ (can't be done)

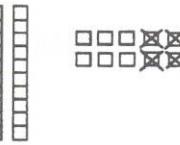

Borrow one hundred and rename it as 10 tens which you add onto the 2 tens.

2 hundreds

12 tens

6 ones left

Step 3: $2 \text{ hundreds} - 1 \text{ hundred} = 1 \text{ hundred}$

$$\begin{array}{r} 12 \\ 2 \cancel{2} \cancel{1} \\ - 145 \\ \hline 186 \end{array}$$

check

$$\begin{array}{r} 11 \\ 186 \\ + 145 \\ \hline 331 \end{array}$$

Now work through this example, where you must also rename one thousand as ten hundreds to do the subtraction.

$$3\,245 - 1\,678 = \underline{\hspace{2cm}}$$

Step 1:

$$\begin{array}{r} 3\,15 \\ 3\,245 \\ -1\,678 \\ \hline 7 \end{array}$$

Step 2:

$$\begin{array}{r} 13 \\ 1\,\cancel{2}\,45 \\ -1\,678 \\ \hline 67 \end{array}$$

Step 3:

Zeroes in Subtracting

You will have subtraction questions with a zero in the place that you want to borrow from. You have to do a double borrowing. Look carefully at the example.

Example:
$$\begin{array}{r} 2\ 405 \\ -\ 368 \\ \hline \end{array}$$

Step 1: 5 ones – 8 ones (can't be done)

Borrow one ten – whoops – no tens!

Borrow one hundred and rename it as 10 tens...

$$\begin{array}{r} 3\ 10 \\ 2\ \cancel{4}\cancel{0}\cancel{5} \\ -\ 368 \\ \hline \end{array}$$

Now, borrow a ten. 15 ones – 8 ones = 7 ones

$$\begin{array}{r} 9 \\ 3\ \cancel{1}\cancel{0}\ 15 \\ 2\ \cancel{4}\cancel{0}\cancel{5} \\ -\ 368 \\ \hline 7 \end{array}$$

Step 2: 9 tens – 6 tens = 3 tens

Step 3: 3 hundreds – 3 hundreds = 0 hundreds

Step 4: 2 thousands – no thousands = 2 thousands

$$\begin{array}{r} 9 \\ 3\ \cancel{1}\cancel{0}\ 15 \\ 2\ \cancel{4}\cancel{0}\cancel{5} \\ -\ 368 \\ \hline 2\ 037 \end{array}$$

Topic E: Estimating Answers in Subtraction

You have learned how to round numbers. Now you can use that skill in rounding numbers to find an **approximate** difference.

By estimating your answer first, you can tell if your answer is sensible.

In these examples, estimate the answer. Round each number **BEFORE** you subtract.

Example A:

47	rounds to	50
<u>- 26</u>	rounds to	<u>- 30</u>
		20

Example B:

870	rounds to	900
<u>- 342</u>	rounds to	<u>- 300</u>
		600

Example C:

24 397	rounds to	24 000
<u>- 6 148</u>	rounds to	<u>- 6 000</u>
		18 000

Usually you estimate to the largest place value that you can.

Exercise One

Estimate the differences. Round the numbers before you subtract. Check your work using the answer key at the end of the exercise.

Estimating Answers in Subtraction Word Problems

When you are solving word problems, **an estimate tells you if your answer makes sense.** You can use your estimate to help you check your answers. If your answer and the estimate are not close, then you know that you should subtract your numbers again.

Exercise Two

Estimate the following answers. Be sure to round to the largest place value possible before adding or subtracting. Remember to **circle** the information and **underline** what is being asked.
Check your work using the answer key at the end of the exercise.

Example:

On a recent petition about sales tax, Mulan had 2 865 people sign. Arnav had 1 564 people sign the petition. Estimate how many more people Mulan had sign than Arnav.

On a recent petition about sales tax, Mulan had **2 865** people sign. Arnav had **1 564** people sign the petition. **Estimate how many more people** Mulan had sign than Arnav.

$$\begin{array}{r} 2\ 865 \\ - 1\ 564 \\ \hline \end{array} \qquad \textbf{Estimate:} \qquad \begin{array}{r} 3\ 000 \\ - 2\ 000 \\ \hline 1\ 000 \end{array}$$

Mulan had 1 000 more people sign the petition.

- a) On Tuesday, a coffee shop had sales of \$8 523. On Wednesday, the same coffee shop had sales of \$6 914. Estimate the difference between Tuesday's sales and Wednesday's sales.

- b) Last week, 4 931 passengers used the ABE Taxi Company. This week, there were 3 491 passengers. Estimate how many more passengers used ABE Taxi Company last week.
- c) In Japan, people chew 52 700 tons of gum. In Russia, people chew 25 700 tons of gum. Estimate the how many more tons of gum the Japanese chew.
- d) In Colombia there are 1 897 bird species. In China, there are 1 319 bird species. Estimate how many more bird species there are in Colombia.

- e) The whale shark weighs 30 500 kilograms. The basking shark weighs 9 258 kilograms. Estimate how much more the whale shark weighs.
- f) In India there were 155 204 post offices in 2007. In China there were 59 886 post offices. Estimate the difference.
- g) By 2008, the Montreal Canadiens had played the most games 5 792. The Buffalo Sabres had played 2 952. Estimate how many more games the Montreal Canadiens had played.

- h) In 2006, the population of Kelowna was 162 276. The population of Prince George was 83 225. Estimate how many more people live in Kelowna in 2006.

Answers to Exercise Two

a) $\$9\,000 - \$7\,000 = \$2\,000$

b) $5\,000 - 3\,000 = 2\,000$ passengers

c) $50\,000 - 30\,000 = 20\,000$ tons

d) $2\,000 - 1\,000 = 1\,000$ species

e) $31\,000 - 9\,000 = 22\,000$ kilograms

f) $160\,000 - 60\,000 = 100\,000$ post offices

g) $6\,000 - 3\,000 = 3\,000$ games

h) $160\,000 - 80\,000 = 80\,000$ people

B. Estimate each of the following word problems. **6 marks**

Be sure to include the unit of measure in your answer. (2 marks each)

Be sure to circle information and underline what is being asked.

- a) A magazine has 54 823 readers. Last year the magazine had 26 876 readers. By how much did number of readers increase?
 - b) In 2009, the number of marriages per year in Japan was 964 702. The number of marriages per year in Egypt was 525 412. How many more marriages were there in Japan than Egypt?
 - c) In 2010, in France there were 235 846 people with the last name Martin. There were 78 177 people with the last name Moreau. How many more Martins were there?

Topic F: Problem Solving

Why are you studying mathematics?

Some of you are taking math because you “have to...”, but we hope you all want to have math skills to help you in your jobs, in job training, and in your everyday life. Numbers are an important part of our lives – we are surrounded by numbers.

Numbers are not often by themselves or set up neatly on a page for us to add or subtract. Numbers are usually in the middle of sentences and mixed in with other numbers. Sorting out the numbers you want and deciding what to do with those numbers is called **problem solving**.

You are going to learn five problem solving steps that will be useful in **all** your math work in courses, in jobs, and in your everyday life.

Problem Solving Steps

Step 1:

READ or LISTEN TO the problem carefully. **UNDERSTAND** the problem. Are there words that help you imagine what is happening? Can you draw a picture or diagram to show what is happening? Can you say the problem in your own words? What is the **QUESTION**? Underline it.

Step 2:

What does the problem tell you? What do you know? Write down or  circle the **INFORMATION** you have. Often you have more information than you need. Think about the question you need to answer and use only the information that will help you answer that question. What do you want to find out?

Step 3:

What must you do with the information to answer the question? What **ARITHMETIC OPERATION** should you use – addition, subtraction, multiplication or division? You will be learning **key words** and **patterns** that will help you choose the correct operation. Write an equation for the problem. An equation is a number sentence such as

$$12 + 5 = \underline{\hspace{2cm}}$$

Step 4: **ESTIMATE** the answer.

- Round the numbers so you can work with them quickly.
- Use the operation you chose in Step 3 and come to a quick answer.
- Does this estimated answer make sense? Does it answer the question in the problem? **THINK** about this before you do Step 5.

Step 5: **SOLVE** the problem using the **actual** numbers.

- Check your arithmetic calculations.
- Compare your result to your estimated answer.
- Reread the problem. Does your answer make sense?
- Write a sentence answer to the problem.

You must always say **what** the numbers are counting. “He has 4,” means nothing. We need to know 4 what... 4 children? 4 dogs? 4 dollars? These are called the **units**.

Some abbreviations used with numerals:

kilometre	km	metre	m
centimetre	cm	kilogram	kg
gram	g	litre	L
hour	h	minute	min

Now study the three example problems that show the five steps.

Example A:

Jorge earned \$165 last week and \$142 this week in his job pumping gas at the service station. He spent \$15 on his girlfriend's gift. How much did he earn pumping gas?

Step 1: **READ. UNDERSTAND THE PROBLEM. FIND THE QUESTION.**
Underline it.

How much did Jorge earn pumping gas?

Step 2: Find the **NEEDED INFORMATION**. Circle it.
Jorge earned \$165 and \$142.

The information about his girlfriend's gift has nothing to do with finding out how much he earned.

Step 3: What **ARITMETIC OPERATION** to use?
*We are putting together two amounts. That is **addition**.*

The equation: $\$165 + \$142 = \text{what he earned.}$

Step 4: **ESTIMATE.**

$$\begin{array}{r} \$165 \approx \$170 \text{ or } \$200 \\ + \$142 \approx \$140 \text{ or } \$100 \\ \hline \$310 \quad \$300 \end{array}$$

*Is about \$300 a reasonable answer to the question? Is it sensible to earn \$300 for two weeks of pumping gas? Probably. \$3 000 would **NOT** be sensible, and \$30 would **NOT** be sensible.*

Step 5: **SOLVE, CHECK, WRITE A SENTENCE ANSWER.**

$$\begin{array}{r} \$165 \\ + \$142 \\ \hline \$307 \end{array} \quad \begin{array}{l} \text{Check by adding again. } \checkmark \\ \text{Is } \$307 \text{ close to the estimate? } \checkmark \\ \text{Make sense? } \checkmark \end{array}$$

Jorge earned \$307 pumping gas.

Example B:

The town of Gloryville had a population of 4 206 people before the mill had a big lay-off in May 2007. Since then 858 people have moved away. Find the population of Gloryville now.

Step 1: **READ, UNDERSTAND THE PROBLEM, FIND THE QUESTION.**
Underline it.

Find the population of Gloryville now.

Step 2: **CIRCLE NEEDED INFORMATION**

(4 206) *people before*
(858) *people moved away*

The date of the lay-off is not needed to answer the question.

Step 3: **OPERATION**

One amount is being taken away. That is subtraction.

Equation: $4\ 206 - 858 = \text{people in Gloryville now.}$

Step 4: **ESTIMATE**

$$\begin{array}{r} 4\ 206 \approx 4\ 000 \text{ or } 4\ 200 \\ - 858 \approx 1\ 000 \text{ or } -900 \\ \hline 3\ 000 \quad 3\ 300 \end{array}$$

Step 5: **SOLVE, CHECK, WRITE SENTENCE ANSWER**

$$\begin{array}{r} \begin{array}{r} 11\ 9 \\ 3\ 1\cancel{1}\cancel{1}\ 16 \\ \cancel{4}\cancel{2}06 \\ - 858 \\ \hline 3\ 348 \end{array} & \text{check:} & \begin{array}{r} 1\ 1\ 1 \\ 3\ 348 \\ + 858 \\ \hline 4\ 206 \quad \checkmark \end{array} \end{array}$$

Close to estimate? ✓

Makes sense? ✓

Gloryville has a population now of 3 348 people.

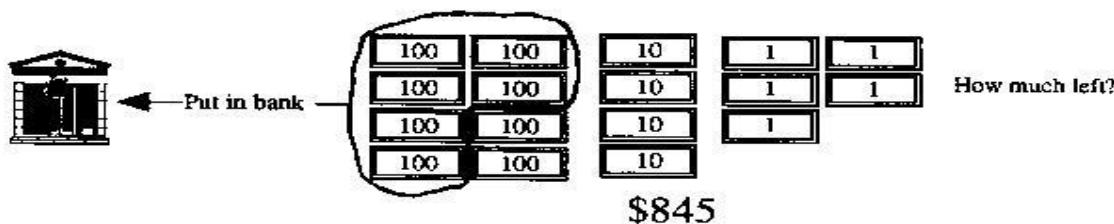

Example C:

Paul works at a lumber mill and is paid every two weeks. He has an account at the bank. Today he got a cheque for \$845. He and his wife decided to deposit \$600 in the account and keep the rest of the money out for a weekend trip. How much money did Paul and his wife keep out for the weekend trip?

Step 1: **QUESTION**

How much money did Paul and his wife keep for the weekend trip?

Can I draw a picture or diagram?

Step 2: **NEEDED INFORMATION**

Paul got a cheque for \$845 for two weeks work.

He and his wife decided to put \$600 in their account.

Step 3: **OPERATION**

*One amount is being taken away. That is **subtraction**.*

Equation: $\$845 - \$600 = \text{money left over for weekend trip}$

Step 4: **ESTIMATE**

$$\begin{array}{r} \$845 \approx 850 \\ - \$600 \approx 600 \\ \hline \$250 \end{array}$$

Step 5: **SOLVE, CHECK, WRITE SENTENCE ANSWER**

$$\begin{array}{r} \$845 \\ - \$600 \\ \hline \$245 \end{array} \quad \begin{array}{l} \text{check: } \\ + \$600 \\ \hline \$845 \quad \checkmark \end{array}$$

Close to estimate? ✓

Makes sense? ✓

Paul and his wife have \$245 for the weekend trip.

Addition Problems

The problems in this section all use the addition operation to find the solution (the answer to the problem). Addition problems give two or more amounts that must be put together (added). When you read the problems, pay special attention to **key words** and **patterns** that will help you to recognize other addition problems.

Key words that point to ADDITION

sum	total	altogether
combine	entire	complete
	in all	

Exercise One

Do these problems by following the five problem solving steps. It is good practice to write down each step while you are learning this method. Check your work using the answer key at the end of the exercise.

- a) It was raining so Gita decided to bake several batches of cookies and freeze them. She made 75 chocolate chip cookies, 96 of her son's favourite ginger snaps, and 42 fancy "Birds' nest" cookies for when she had company. How many cookies did Gita bake altogether?

Step 1: What is the **question**? Underline it.

Step 2: What **information** are you given that you **need** to solve the problem?
Circle it.

Step 3: What **arithmetic operation** should you use? *addition* Why?

Step 4: **Estimate** the answer using rounded numbers.

Step 5: **Solve, check, and write a sentence answer.**

- b) Levi wanted to paint his apartment and needed to buy some supplies. Brushes cost \$10, sandpaper cost \$4, a paint roller and tray cost \$9 and the paint was \$55. How much did it cost for all the paint supplies?

Step 1: What is the **question**? **Underline it.**

Step 2: What **information** are you given that you **need** to solve the problem?
 **Circle** it.

Step 3: What **arithmetic operation** should you use? *addition* Why?

Step 4: **Estimate** the answer using rounded numbers.

Step 5: **Solve, check, and write a sentence answer.**

- c) Altogether, the college has 475 students in the Adult Basic Education department, 320 University Transfer students, 64 students in the Early Childhood Education program, 232 students in the Forestry department, and 125 students in trades courses. How many students are at the college?

Step 1: What is the **question**? **Underline it.**

Step 2: What **information** are you given that you **need** to solve the problem?
Circle it.

Step 3: What **arithmetic operation** should you use? *addition* Why?

Step 4: **Estimate** the answer using rounded numbers.

Step 5: **Solve, check, and write a sentence answer.**

- d) Zhou works part-time at the daycare centre. Last month she worked every week. The first week she worked 24 hours, 36 hours the second week, 29 hours the third week, and only 17 hours in the fourth week. Give the total number of hours that Zhou worked last month.

Step 1: What is the **question**? **Underline it.**

Step 2: What **information** are you given that you **need** to solve the problem?
 Circle it.

Step 3: What **arithmetic operation** should you use? *addition* Why?

Step 4: **Estimate** the answer using rounded numbers.

Step 5: **Solve, check, and write a sentence answer.**

The rest of the problems in this exercise just ask you for the estimate and the actual solution. You must still follow all five steps but you do not have to write everything down. Remember that the solution to problems must include the units (what is being counted) and should be written in a sentence answer.

- e) September is hard on the family budget! Amul figured they spent \$275 for clothes and shoes for their two little daughters, \$43 for school supplies, \$24 for haircuts, and \$130 to enroll them in the Figure Skating Club. How much has Amul spent getting his children ready for school and skating?

- f) The sign in the elevator says “1200 kg maximum weight”. Can the elevator hold all these large football players safely? Sean weighs 91 kg, Raja is 114 kg, Eyota is a heavyweight at 159 kg. Kiefer is even heavier at 168 kg, the two fullbacks weigh 135 kg and 148 kg, and the quarterback Juan is a muscular 87 kg. Find their combined weight to see if they are all safe in the elevator.

- g) On their holidays, the Matthews family drove to Saskatchewan from their home in Langley. They drove 620 km the first day, 810 km the second day, and only drove 350 km the next day because they went to Head Smashed-in Buffalo Jump Museum. On the fourth day, they drove a long 1 208 km. How many kilometres did they drive on their trip to Saskatchewan?

Subtraction Problems

These problems will give you a chance to “get the feel” of subtraction problems.

Subtraction problems tell you an amount and then take something away from that amount. Money might be spent, saved, or deducted (taken off), people might move away, items might be sold or lost. These types of subtraction problems are quite easy to recognize.

A more difficult type of subtraction problem **compares two amounts**. You will be asked to **find the difference** between the amounts. Subtract to find the difference. These problems might ask you “how much more?”, “how much less?”, “how many fewer?”, “how much farther?”, “how much did it increase (go up)?”, “what is the decrease (amount it went down)?” You might also have to find the age of something by comparing the dates.

Key Words that point to SUBTRACTION

difference balance amount left the saving

how much more (or greater, or farther)

how much less (or fewer, or smaller)

how old, find the age

Exercise Two

Use the five problem steps to solve these problems. Write down each step for the first three problems. Check your work using the answer key at the end of the exercise.

- a) Only 368 people went to the movie theatre on Friday night, but on Saturday 756 went to see the new comedy movie they were showing. How many more people went to the theatre on Saturday than on Friday?

Step 1: What is the **question**? **Underline it.**

Step 2: What **information** are you given that you **need** to solve the problem?
Circle it.

Step 3: What **arithmetic operation** should you use? *subtraction* Why?

Step 4: **Estimate** the answer using rounded numbers.

Step 5: **Solve, check, and write a sentence answer.**

- b) The highway construction started in 2004 and it was finished in 2010. How long did the construction take?

Step 1: What is the **question**? **Underline** it.

Step 2: What **information** are you given that you **need** to solve the problem?
Circle it.

Step 3: What **arithmetic operation** should you use? *subtraction* Why?

Step 4: **Estimate** the answer using rounded numbers. In a question like this, an estimation using rounded numbers is not useful because the numbers are too similar and would round to the same number. Instead, think about the question carefully and figure out an approximate answer in your head.

Step 5: **Solve, check, and write a sentence answer.**

- c) Aimee's gross pay was \$1 656, but she had \$331 of deductions. What is her net pay?
(*Gross pay* is the amount we earn before anything is taken off. *Net pay* is the amount we take home after taxes, pension, employment insurance, etc. have been deducted.)

Step 1: What is the **question?** **Underline it.**

Step 2: What **information** are you given that you **need** to solve the problem?
 it.

Step 3: What **arithmetic operation** should you use? *subtraction* Why?

Step 4: **Estimate** the answer using rounded numbers.

Step 5: **Solve, check, and write a sentence answer.**

- d) Mike and Ann want to can 240 jars of fruit this year. They have already canned 165 jars. How many more jars do they need to do?

Two-Operation Questions

Sometimes you may need to use two operations to solve a question. We work from left to right when solving questions that involve two operations. If addition is first, you must do the addition first then the subtraction. If subtraction is first, you must do the subtraction first and then do the addition.

Example A: $342 + 325 - 146 =$

Step 1:

$$\begin{array}{r} 342 \\ + 325 \\ \hline 667 \end{array}$$

Step 2: Use your answer and subtract 146.

$$\begin{array}{r} 667 \\ - 146 \\ \hline 521 \end{array}$$

$$342 + 325 - 146 = 521$$

Example B: $475 - 284 + 362 =$

Step 1:

$$\begin{array}{r} 475 \\ - 284 \\ \hline 191 \end{array}$$

Step 2: Use your answer and add 362.

$$\begin{array}{r} 191 \\ + 362 \\ \hline 553 \end{array}$$

$$475 - 284 + 362 = 553$$

Exercise Four

Find the sum or difference for each question. Check your work using the answer key at the end of the exercise.

a) $312 + 541 - 135 =$

b) $427 + 231 - 384 =$

c) $687 - 434 + 256 =$

d) $754 - 576 + 393 =$

e) $1\,456 + 218 - 295 =$

f) $2\,461 + 723 - 349 =$

g) $3\,857 - 665 + 1\,234 =$

h) $4\,367 - 843 + 5\,679 =$

i) $5\,247 + 2\,216 - 4\,673 =$

j) $1\,285 + 4\,672 - 1\,401 =$

k) $7\,354 - 4\,038 + 2\,348 =$

l) $4\,187 - 2\,574 + 1\,846 =$

$m) \quad 5\ 314 + 7\ 053 - 597 =$

$n) \quad 4\ 315 + 3\ 197 - 2\ 106 =$

$o) \quad 46\ 124 - 9\ 762 + 2\ 534 =$

$p) \quad 70\ 534 - 7\ 689 + 1\ 824 =$

Answers to Exercise Four

- | | | | | | | |
|-----------|-----------|----------|----------|----------|-----------|----------|
| a) 718 | b) 274 | c) 509 | d) 571 | e) 1 379 | f) 2 835 | g) 4 426 |
| h) 9 203 | i) 2 790 | j) 4 556 | k) 5 664 | l) 3 459 | m) 11 770 | n) 5 406 |
| o) 38 896 | p) 64 669 | | | | | |

Two-Operation Problems

Sometimes you may need to use more than one operation to solve a word problem or a real-life problem.

Example A: Janet bought a submarine sandwich for \$5, a soft drink for \$1, and some carrot cake for \$3. She gave the cashier a twenty dollar bill. How much money did she get back as change?

Step 1: **Question** – *How much change from \$20?*

Step 2: **Information** – Spent \$5 and \$1 and \$3. Gave cashier \$20.

Step 3: **Operations**

1. Add the amounts she spent to find the total.
 $\$5 + \$1 + \$3 = \underline{\hspace{2cm}}$
2. Subtract the amount she spent from \$20.
 $\$20 - \text{total of what she spent} = \text{change}$

Step 4: **Estimate**

Numbers are only one digit so do not round them. But a quick add tells you that her change will be about \$10.

Step 5: **Solve**

1. $\$5 + \$1 + \$3 = \9 total spent
2. $\$20 - \$9 = \$11$

Janet will get \$11 in change.

Exercise Five

Use the 5 problem solving steps. Look for key words and patterns to help you choose the correct operation. Estimate the answer using rounded numbers **if** the numbers have 2 digits or more. Show all your work. Check your work using the answer key at the end of the exercise.

- a) Maureen weighed 72 kg and decided to go on a diet for her New Year's Resolution. She lost 3 kg in January, 2 kg in February, and 4 kg in March. How much did she weigh after her three month diet?

Unit 3 Review - Subtraction

You will now practice all of the skills you learned in Unit 3. Check your work using the answer key at the end of the review

A. Find the differences.

a)
$$\begin{array}{r} 58 \\ - 24 \\ \hline \end{array}$$

b)
$$\begin{array}{r} 99 \\ - 65 \\ \hline \end{array}$$

c)
$$\begin{array}{r} 98 \\ - 75 \\ \hline \end{array}$$

d)
$$\begin{array}{r} 87 \\ - 34 \\ \hline \end{array}$$

e)
$$\begin{array}{r} 45 \\ - 21 \\ \hline \end{array}$$

f)
$$\begin{array}{r} 76 \\ - 35 \\ \hline \end{array}$$

B. Find the differences.

a)
$$\begin{array}{r} 995 \\ - 423 \\ \hline \end{array}$$

b)
$$\begin{array}{r} 987 \\ - 316 \\ \hline \end{array}$$

c)
$$\begin{array}{r} 579 \\ - 458 \\ \hline \end{array}$$

d)
$$\begin{array}{r} 877 \\ - 602 \\ \hline \end{array}$$

e)
$$\begin{array}{r} 468 \\ - 432 \\ \hline \end{array}$$

f)
$$\begin{array}{r} 686 \\ - 271 \\ \hline \end{array}$$

C. Find the differences.

a)
$$\begin{array}{r} 1\,265 \\ - 541 \\ \hline \end{array}$$

b)
$$\begin{array}{r} 4\,587 \\ - 534 \\ \hline \end{array}$$

O. Use the 5 problem solving steps. Look for key words and patterns to help you choose the correct operation. Estimate the answer using rounded numbers if the numbers have 2 digits or more.

- a) Last Friday, 1 259 students and 339 parents went to the hockey game. How many students and parents were at the game?
 - b) The Laerdal Tunnel in Norway is the longest road tunnel in the world. It is 24 510 metres long. The Zhongnanshan Tunnel in China is the second longest road tunnel in the world. It is 18 040 metres long. How much longer is the Laerdal Tunnel?
 - c) Li Chiu bought school clothes for her children. She spent \$46 at the department store, \$40 at the shoe store and \$78 at the discount store. How much did Li spend altogether?

- d) A truck weighed 4 267 kilograms when loaded with dirt. When the truck is empty it weighs 2 189 kilograms. How much did the dirt weigh?

P. Find the sum or difference for each question.

a) $776 + 634 - 478 =$ b) $3\,714 - 819 + 496 =$

c) $7\,413 - 249 + 382 =$ d) $6\,415 + 5\,829 - 1\,756 =$

Q. Use the 5 problem solving steps. Look for key words and patterns to help you choose the correct operation. Estimate the answer using rounded numbers if the numbers have 2 digits or more. Show all your work.

- a) Two weeks ago, Van opened a new bank account and deposited \$295. He paid \$146 for his gas bill. Van then deposited \$1 632 in his account. How much money is in his account?

 - b) Michel has 1 532 metres of fencing. He needs to fence his garden which measures 253 metres long and 187 metres wide. Does he have enough fencing? How much fencing will be left over?

CONGRATULATIONS!!

Now you have finished Unit 3.

TEST TIME!

Ask your instructor for the Practice Test for this unit.

Once you've done the practice test,
you need to do the unit 3 test.

Again, ask your instructor for this.
Good luck!

Unit Four

Multiplication

Topic A: Introduction and Multiplication Facts

Multiplication is a fast way to add. Multiplication is used when the amounts to be added are the same.

$$\begin{array}{ccccccccccccc} \diamond & \diamond & \diamond & + & \diamond & \diamond & \diamond \\ 3 & & & + & 3 & & & + & 3 & & + & 3 & & + & 3 & & + & 3 & & = 21 \end{array}$$

How many groups are there? **7**

$$7 \text{ groups of } 3 = 21$$

This can be written as a multiplication equation.

$$7 \times 3 = 21$$

\times is the sign that means to multiply. We often say “times” for this multiplication sign.

$$\begin{array}{ccccccccc} \circ & \circ & & \circ & \circ & & \circ & \circ & & \circ & \circ \\ 2 & + & 2 & + & 2 & + & 2 & = & 8 \end{array}$$

$$4 \text{ groups of } 2 = 8$$

$$4 \times 2 = 8 \quad \text{say “4 times 2 equals 8” or “4 multiplied by 2 equals 8”}$$

The result of a multiplication is called the **product**.

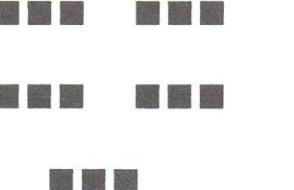

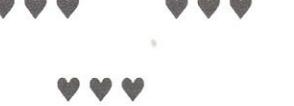

The numbers that are multiplied together are called **factors**.

$$7 \times 3 = 21 \text{ The factors are 7 and 3.}$$

The **product** is 21.

Exercise One

For each drawing, write the addition equation and find the total. Then write the multiplication equation that describes the same drawing and find the product. Check your work using the answer key at the end of the exercise.

	Drawing	Addition Equation	Multiplication Equation
a)		$4 + 4 + 4 = 12$	$3 \times 4 = 12$
b)			
c)			
d)			
e)			
f)

|---|--------------------|
| a) $4 + 4 + 4 = 12$ | $3 \times 4 = 12$ |
| b) $6 + 6 = 12$ | $2 \times 6 = 12$ |
| c) $3 + 3 + 3 + 3 + 3 = 15$ | $5 \times 3 = 15$ |
| d) $5 + 5 + 5 + 5 = 20$ | $4 \times 5 = 20$ |
| e) $8 + 8 + 8 + 8 = 32$ | $4 \times 8 = 32$ |
| f) $3 + 3 + 3 = 9$ | $3 \times 3 = 9$ |
| g) $2 + 2 + 2 + 2 + 2 + 2 + 2 + 2 + 2 + 2 = 22$ | $11 \times 2 = 22$ |

Exercise Two

For each drawing, write the addition equation and find the total. Then write the multiplication equation that describes the same drawing and find the product. Check your work using the answer key at the end of the exercise.

| g) $4 + 4 + 4 + 4 + 4 + 4 + 4 = 28$ | $7 \times 4 = 28$ |

Exercise Four

Look at the examples. Complete the chart. Check your work using the answer key at the end of the exercise.

Example A: 2×3 is read as “two times three” and means $3 + 3$

3×2 is read as “three times three” and means $2 + 2 + 2$

	“is read as”	means
5×7	five times seven	$7 + 7 + 7 + 7 + 7$
2×5		
3×4		
5×2		
4×8		
2×7		
3×5		
2×8		
3×9		
6×4		
7×3		

Answers to Exercise Four

	“is read as”	means
5×7	five times seven	$7 + 7 + 7 + 7 + 7$
2×5	two times five	$5 + 5$
3×4	three times four	$4 + 4 + 4$
5×2	five times two	$2 + 2 + 2 + 2 + 2$
4×8	four times eight	$8 + 8 + 8 + 8$
2×7	two times seven	$7 + 7$
3×5	three times five	$5 + 5 + 5$
2×8	two times eight	$8 + 8$
3×9	three times nine	$9 + 9 + 9$
6×4	six times four	$4 + 4 + 4 + 4 + 4 + 4$
7×3	seven times three	$3 + 3 + 3 + 3 + 3 + 3 + 3$

Adding will give the answer to multiplication questions but it is very slow, especially if the numbers are large. The **times tables** are the multiplication facts. You may need to memorize the times tables. You will use the times tables for multiplying, dividing, and working with fractions.

$0 \times \text{any number} = 0$

$\text{any number} \times 0 = 0$

$0 \times 0 = 0$	$0 \times 0 = 0$
$0 \times 1 = 0$	$1 \times 0 = 0$
$0 \times 2 = 0$	$2 \times 0 = 0$
$0 \times 3 = 0$	$3 \times 0 = 0$
$0 \times 4 = 0$	$4 \times 0 = 0$
$0 \times 5 = 0$	$5 \times 0 = 0$
$0 \times 6 = 0$	$6 \times 0 = 0$
$0 \times 7 = 0$	$7 \times 0 = 0$
$0 \times 8 = 0$	$8 \times 0 = 0$
$0 \times 9 = 0$	$9 \times 0 = 0$
$0 \times 10 = 0$	$10 \times 0 = 0$

$1 \times$ any number = that number

$$1 \times 0 = 0$$

$$1 \times 1 = 1$$

$$1 \times 2 = 2$$

$$1 \times 3 = 3$$

$$1 \times 4 = 4$$

$$1 \times 5 = 5$$

$$1 \times 6 = 6$$

$$1 \times 7 = 7$$

$$1 \times 8 = 8$$

$$1 \times 9 = 9$$

$$1 \times 10 = 10$$

$0 + 0 = 0$	$2 \times 0 = 0$
$1 + 1 = 2$	$2 \times 1 = 2$
$2 + 2 = 4$	$2 \times 2 = 4$
$3 + 3 = 6$	$2 \times 3 = 6$
$4 + 4 = 8$	$2 \times 4 = 8$
$5 + 5 = 10$	$2 \times 5 = 10$
$6 + 6 = 12$	$2 \times 6 = 12$
$7 + 7 = 14$	$2 \times 7 = 14$
$8 + 8 = 16$	$2 \times 8 = 16$
$9 + 9 = 18$	$2 \times 9 = 18$
$10 + 10 = 20$	$2 \times 10 = 20$

Can you see a pattern? If you forget a multiplication fact with 2, you can just add.

Example: $2 \times 4 = 4 + 4 = 8$

$$2 \times 7 = 7 + 7 = 14$$

The three times table is special. The digits of each product adds up to 3, 6 or 9. You will know your answer is right if you add the digits of the product (the answer for a multiplication question) and the answer is 3, 6 or 9.

$3 \times 0 = 0$	
$3 \times 1 = 3$	3
$3 \times 2 = 6$	6
$3 \times 3 = 9$	9
$3 \times 4 = 12$	$12 \gg 1 + 2 = 3$
$3 \times 5 = 15$	$15 \gg 1 + 5 = 6$
$3 \times 6 = 18$	$18 \gg 1 + 8 = 9$
$3 \times 7 = 21$	$21 \gg 2 + 1 = 3$
$3 \times 8 = 24$	$24 \gg 2 + 4 = 6$
$3 \times 9 = 27$	$27 \gg 2 + 7 = 9$
$3 \times 10 = 30$	$30 \gg 3 + 0 = 3$

Need Extra Practice?

Domino Practice - Find a partner and ask your instructor for double twelve dominoes.

- Use only the following dominoes:
0-0 to 0-10
1-1 to 1-10
2-2 to 2-10
3-3 to 3-10
- Turn over the dominoes
- Flip a domino and multiply the two numbers

Example:

This would be 2×6

- If you answer correctly, keep the domino
- If you answer incorrectly, flip the domino over

Study the four times tables below.

4 x 0 = 0
4 x 1 = 4
4 x 2 = 8
4 x 3 = 12
4 x 4 = 16
4 x 5 = 20
4 x 6 = 24
4 x 7 = 28
4 x 8 = 32
4 x 9 = 36
4 x 10 = 40

The fives times table is special. If you are multiplying by an even number, the product ends in zero. If you are multiplying by an odd number, the product ends in five.

$5 \times 0 = 0$
$5 \times 1 = 5$
$5 \times 2 = 10$
$5 \times 3 = 15$
$5 \times 4 = 20$
$5 \times 5 = 25$
$5 \times 6 = 30$
$5 \times 7 = 35$
$5 \times 8 = 40$
$5 \times 9 = 45$
$5 \times 10 = 50$

The products for the odd numbers 1, 3, 5, 7 and 9 end in five.

The products for the even numbers 2, 4, 6, 8 and 10 end in 0.

Study the six times tables below.

6 x 0 = 0
6 x 1 = 6
6 x 2 = 12
6 x 3 = 18
6 x 4 = 24
6 x 5 = 30
6 x 6 = 36
6 x 7 = 42
6 x 8 = 48
6 x 9 = 54
6 x 10 = 60

Need Extra Practice?

Card Practice - Find a partner and ask your instructor for a deck of cards.

- Take out all the jacks, queens and kings. You will only need the aces to tens.
- Choose a times table to practice.

- **Example:** to practice the 5 times table
- Choose a single 5 card and place it face up.
- Shuffle the remainder of the cards.
- From the shuffled cards, place one card face up next to the five.
- Multiply. Have your partner check your answer.
- If the answer is correct, leave it on the pile.
- If the answer is incorrect, place the card in front of you.
- Keep turning cards over until there are no cards left.
- Reshuffle any cards in front of you.
- Place a card on the pile and multiply.
- When all the cards are in the pile, you are done.
- Choose a different times table to practice and start again.

Exercise Twelve

Check out your **multiplication facts** by doing this exercise as quickly as possible. Find the product. This exercise includes the zero to six times tables. Check your work using the answer key at the end of the exercise. Then, make a list of any multiplication facts you do not know or which are slow – practice them.

Study the seven times table below.

$7 \times 0 = 0$
$7 \times 1 = 7$
$7 \times 2 = 14$
$7 \times 3 = 21$
$7 \times 4 = 28$
$7 \times 5 = 35$
$7 \times 6 = 42$
$7 \times 7 = 49$
$7 \times 8 = 56$
$7 \times 9 = 63$
$7 \times 10 = 70$

Study the eight times table below.

8 x 0 = 0
8 x 1 = 8
8 x 2 = 16
8 x 3 = 24
8 x 4 = 32
8 x 5 = 40
8 x 6 = 48
8 x 7 = 56
8 x 8 = 64
8 x 9 = 72
8 x 10 = 80

The nines times table is special. The digits of every product add up to nine. Also the first digit in the product is one less than the number you are multiplying

$9 \times 0 = 0$	
$9 \times 1 = 9$	9
$9 \times 2 = 18$	$18 \gg 1 + 8 = 9$
$9 \times 3 = 27$	$27 \gg 2 + 7 = 9$
$9 \times 4 = 36$	$36 \gg 3 + 6 = 9$
$9 \times 5 = 45$	$45 \gg 4 + 5 = 9$
$9 \times 6 = 54$	$54 \gg 5 + 4 = 9$
$9 \times 7 = 63$	$63 \gg 6 + 3 = 9$
$9 \times 8 = 72$	$72 \gg 7 + 2 = 9$
$9 \times 9 = 81$	$81 \gg 8 + 1 = 9$
$9 \times 10 = 90$	$90 \gg 9 + 0 = 9$

Need Extra Practice?

Domino Practice - Find a partner and ask your instructor for double twelves dominoes.

- Use only the following dominoes:
1-0 to 0-10
1-2 to 1-10
2-2 to 2-10
3-3 to 3-10
4-4 to 4-10
5-5 to 5-10
6-6 to 6-10
7-7 to 7-10
8-8 to 8-10
9-9 to 9-10
10-10
- Turn over the dominoes
- Flip a domino and multiply the two numbers

Example:

This would be 2 x 6

- If you answer correctly, keep the domino

Need Extra Practice?

- If you answer incorrectly, flip the domino over
- Card Practice** - Find a partner and ask your instructor for a deck of cards.

- Take out all the jacks, queens and kings. You will only need the aces to tens.
 - Choose a times table to practice.
-
- **Example:** to practice the 8 times table
 - Choose a single 8 card and place it face up.
 - Shuffle the remainder of the cards.
 - From the shuffled cards, place one card face up next to the five.
 - Multiply. Have your partner check your answer.
 - If the answer is correct, leave it on the pile.
 - If the answer is incorrect, place the card in front of you.
 - Keep turning cards over until there are no cards left.
 - Reshuffle any cards in front of you.
 - Place a card on the pile and multiply.
 - When all the cards are in the pile, you are done.
 - Choose a different times table to practice and start again.

Make a list of any errors that you have made and of the facts that you had to really think about.

As you know, it is very important to memorize the times tables. Use the **times table chart** on the next page until you have all the multiplication facts memorized. It is better to look up the right answer than use the wrong product. Finding the right product and saying the facts to yourself will help you learn.

Times Table Chart

Let's say you do not know the product of 8×9 .

- Find the first factor (8) in the column at the left.
- Find the second factor (9) in the top row.
- Go across the row from the 8 and straight down the column from the 9.
- The lines meet at the product which is 72 ... Try it! Now try finding the products of some other multiplication facts.

Times Table Chart

x	0	1	2	3	4	5	6	7	8	9	10
0	0	0	0	0	0	0	0	0	0	0	0
1	0	1	2	3	4	5	6	7	8	9	10
2	0	2	4	6	8	10	12	14	16	18	20
3	0	3	6	9	12	15	18	21	24	27	30
4	0	4	8	12	16	20	24	28	32	36	40
5	0	5	10	15	20	25	30	35	40	45	50
6	0	6	12	18	24	30	36	42	48	54	60
7	0	7	14	21	28	35	42	49	56	63	70
8	0	8	16	24	32	40	48	56	64	72	80
9	0	9	18	27	36	45	54	63	72	81	90
10	0	10	20	30	40	50	60	70	80	90	100

Times Tables are very difficult to memorize. Here's a technique that may help you to learn them.

An instructor used this technique to teach his students the times tables. It does require you to do some work and will take some time. But, if you are willing, you will learn them. Here's how it works.

Most people can only memorize three things; as soon as they try to memorize a fourth thing, they lose one of the first three. So, instead of trying to memorize the complete times table (which is 121 things), just do three.

Start with these three.

$$\begin{aligned}9 \times 9 &= 81 \\8 \times 8 &= 64 \\8 \times 9 &= 72\end{aligned}$$

If you know any of these already, for example, you automatically know that $9 \times 9 = 81$, choose another one, like $7 \times 7 = 49$.

Write these three on small cards or pieces of paper in three different ways:

$$\begin{array}{lll}9 \times 9 = 81 & 9 \times \underline{\quad} = \underline{\quad} & 9 \times \underline{\quad} = 81 \\8 \times 8 = 64 & 8 \times \underline{\quad} = \underline{\quad} & 8 \times \underline{\quad} = 64 \\8 \times 9 = 72 & 8 \times 9 = \underline{\quad} & 8 \times \underline{\quad} = 72\end{array}$$

Note: $8 \times 9 = 72$ and $9 \times 8 = 72$. Both are the same, so when you learn 8×9 you will also know 9×8 . You will have learned part of the 8 times table and part of the 9 times table.

Do a number of these and stick them up around your house – over the kitchen sink, on your bathroom mirror, on your closet door, etc. Then, every time you see one of these, run through it in your mind. It only takes about 5 seconds each time. After about a week or two, you will have learned these three. If anyone were to ask you what 9×9 was, you would automatically know that it is 81. You wouldn't have to figure it out; you would know it. And, once you know it, you will never forget it.

Once you have mastered these three, do three more, like $7 \times 7 = 49$, $7 \times 8 = 56$, $7 \times 9 = 63$. Again, make up small cards and put them all over your house. In another week or so, you will have learned these and can do another three.

If you are willing to do the work, you will learn your times tables. And, once you learn them, you will never forget them. That will make your work in mathematics much easier, and maybe even more fun. Try it! It does work.

Multiplying Across

So far you have only been multiplying numbers when they are **up and down or vertical**.

Example:

$$\begin{array}{r} 4 \\ \times 5 \\ \hline 20 \end{array}$$

Another way to multiply numbers is **across or horizontally**.

Example: $4 \times 5 = 20$

In math, sometimes you will need to work from left to right.

Exercise One

Practice multiplying **across or horizontally**. Find the product. This exercise includes the zero to nine times tables. Check your work using the answer key at the end of the exercise. Then, make a list of any multiplication facts you do not know or which are slow – practice them.

Topic B: Multiplying by 10, 100, and 1 000

When multiplying by 10, 100, 1 000, 10 000, etc., place as many zeros to the right of the number as there are zeros in the 10, 100, 1 000, etc..

To multiply by 10 put one zero after the number.

To multiply by 100 put two zeros after the number.

To multiply by 1 000 put three zeros after the number.

Example: $4 \times 100 =$

100 has two zeroes. Put two zeroes after the number.

$$\mathbf{4 \times 100 = 400}$$

Topic C: Word Problems

Learning multiplication facts is very important. Once you know them all, you can use them to solve word problems.

Words such as **product**, **altogether** and **in all** tell you may need to multiply the numbers. Look for these words when reading word problems and underline them before trying to solve a problem. **Circle** the information that is given.

Example: Mr. Wong rides his bicycle 6 kilometres every day. How far will he ride altogether in 9 days?

Mr. Wong rides his bicycle 6 kilometres every day. How far will he ride altogether in 9 days?

You have circled 6 kilometres and 9 days. This is the information you will use to find the answer.

You have underlined “How far will he ride.” These words tell you to multiply.

$$\begin{array}{r} 6 \text{ kilometres} \\ \times 9 \text{ days} \\ \hline 54 \end{array}$$

Mr. Wong will ride 54 kilometres in 9 days.

Exercise One

Solve each of the following word problems. Be sure to underline the words that tell you to multiply. Circle the information that is given. Have your instructor check your underlining and circling.

- a) There are 5 rows of mailboxes in an apartment building. There are 7 mailboxes in each row. How many mailboxes are there in all?

- b) At the grocery store, there are 8 cans of corn in each row. There are 6 rows of corn. How many cans of corn are there altogether?

- c) There are 7 days in a week. How many days are there in 4 weeks?

- d) Thalia walks 6 blocks each day going to and from college. How many blocks does she walk going to and from college 5 days a week?
- e) There are 8 chairs around each table in the library. There are 9 tables in the library. How many chairs are around all the tables?
- f) Barindra works 7 hours each day. How many hours will he work in 6 days?

- g) Milton bought 5 cases of pop. Each case had 8 cans. How many cans of pop did Milton have?
- h) There are 8 hotdogs in a package. How many hotdogs are there in 7 packages?
- i) Solita placed 7 cupcakes on a plate. She filled 3 plates. How many cupcakes were there altogether?

Answers to Exercise One

Area

Area means **the surface that is inside a shape**. The units of measure of area are always **square units** (meaning having both length and width).

Rectangle

length

width

To find the area of a rectangle, multiply **length x width**.

Example A:

8 metres

3 metres

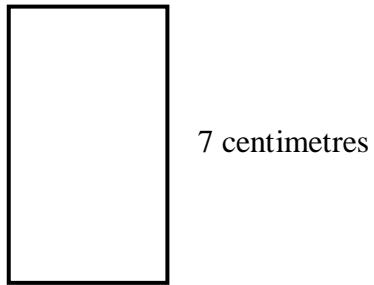

To find the area of the rectangle multiply **length x width**.

Area = length x width

Area = 8 metres x 3 metres

Area = 24 square metres

Example B: 4 centimetres

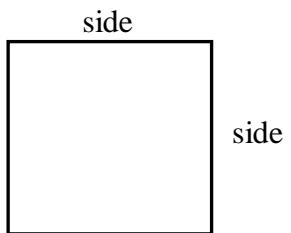

To find the area of the rectangle multiply **length x width**.

Area = length x width

Area = 4 centimetres x 7 centimetres

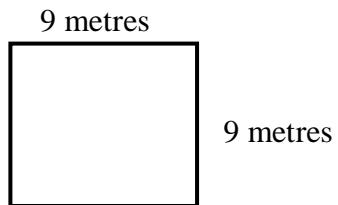

Area = 28 square centimetres

Square

To find the area of a square multiply **side x side**.

Example C:

To find the area of the square multiply **side x side**.

Area = side x side

Area = 9 metres x 9 metres

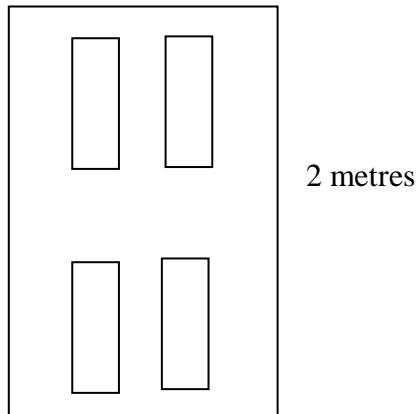

Area = 81 square metres

Exercise Two

Find the area of each shape. Be sure to include the units of measure in your answer. Check your work using the answer key at the end of the exercise.

Unit 5

Making Change, Time & Perimeter

Topic A: Counting to Make Change

Practice your counting by filling in the counting chart. Have your instructor check your chart when you are done.

0	1	2	3	4	5	6	7	8	9
10									

Use your counting chart and start at 0. Count five and write down that number.

0	5	10							

If you had a pile of nickels or five dollar bills and wanted to know how much money you have, you would count by 5's.

Use your counting chart and starting at 0. Count ten and write down that number.

0	10	20							

If you had a pile of dimes or ten dollar bills and wanted to know how much money you have, you would count by 10's.

Use your counting chart and starting at 0. Count twenty-five and write down that number.

0	25			

If you had a pile of quarters and wanted to know how much money you have, you would count by 25's.

Exercise One

Write the missing numerals. Check your work using the answer key at the end of the exercise.

a) Count by 5's.

0		10		20		30		40	
50		60		70		80		90

Topic B: Making Change

When you make change, your first goal is to get a number that ends in 0 or 5. So for example, if you bought something for 53¢, the first thing to do would be to get to 55¢. Check out example A below.

Example A: 53¢ to 55¢

To get from 53¢ to 55¢, you would need 2 pennies.

Example B: 20¢ to 25¢

To get from 20¢ to 25¢, you would need 1 nickel.

Example C: 50¢ to 75¢

To get from 50¢ to 75¢, you would need 1 quarter.

Exercise One

Circle the number of coins you would need to get from the first number to the second number. Make sure to use the least number of coins you can. Check your work using the answer key at the end of the exercise.

a) 32¢ to 35¢

b) 48¢ to 50¢

c) 16¢ to 20¢

d) 67¢ to 70¢

e) 10¢ to 15¢

f) 35¢ to 40¢

g) 55¢ to 60¢

h) 85¢ to 90¢

i) 60¢ to 70¢

j) 80¢ to 90¢

k) 30¢ to 40¢

l) 15¢ to 25¢

m) 25¢ to 50¢

n) 50¢ to 75¢

o) 75¢ to \$1.00

p) 45¢ to 50¢

q) 21¢ to 25¢

r) 55¢ to 65¢

s) 45¢ to 50¢

t) 40¢ to 50¢

u) 70¢ to 80¢

Answers to Exercise One

- a) 3 pennies b) 2 pennies c) 4 pennies d) 3 pennies e) 1 nickel f) 1 nickel
- g) 1 nickel h) 1 nickel i) 1 dime j) 1 dime k) 1 dime l) 1 dime
- m) 1 quarter n) 1 quarter o) 1 quarter p) 1 nickel q) 4 pennies r) 1 dime
- s) 1 nickel t) 1 dime u) 1 dime

Exercise Two

State the number and kind of coins you would need to get from the first number to the second number. Make sure you use the least number of coins as possible. Check your work using the answer key at the end of the exercise.

Example: **56¢ to 60¢**

4 pennies to get to 60¢

a) 27¢ to 30¢

b) 35¢ to 45¢

c) 90¢ to 95¢

d) 25¢ to 50¢

e) 54¢ to 55¢

f) 25¢ to 50¢

g) 65¢ to 75¢

h) 40¢ to 45¢

i) 75¢ to \$1.00

j) 41¢ to 45¢

k) 5¢ to 15¢

l) 55¢ to 65¢

m) 20¢ to 25¢

n) 50¢ to 75¢

o) 88¢ to 90¢

p) 25¢ to 75¢

q) 85¢ to 95¢

r) 50¢ to \$1.00

s) 95¢ to \$1.00

t) 77¢ to 80¢

u) 45¢ to 50¢

Answers to Exercise Two

- a) 3 pennies b) 1 dime c) 1 nickel d) 1 quarter e) 1 penny f) 1 quarter g) 1 dime
- h) 1 nickel i) 1 quarter j) 4 pennies k) 1 dime l) 1 dime m) 1 nickel n) 1 quarter
- o) 2 pennies p) 2 quarters q) 1 dime r) 2 quarters s) 1 nickel t) 3 pennies u) 1 nickel

Example A: 28¢ to 50¢

You would need 2 pennies to get to 30¢.

Then you would need 2 dimes to get to 50¢.

Example B: 36¢ to 50¢

You would need 4 pennies to get to 40¢.

Then you would need 1 dime to get to 50¢.

Example C: 60¢ to 75¢

You would need 1 nickel to get to 65¢.

Then you would need 1 dime to get to 75¢.

OR

You could also begin with 1 dime to get to 70¢.

Then you would need 1 nickel to get to 75¢.

Exercise Three

State the number and kind of coins you would need to get from the first number to the second number. Make sure you use the least number of coins as possible. Check your work using the answer key at the end of the exercise.

Example: **67¢ to 75¢**

**3 pennies to get to 70¢
1 nickel to get to 75¢.**

a) 26¢ to 50¢

Topic C: Telling Time

We have always been interested in keeping track of time. Sundials were the first way used to keep track of time. The sundial had limits. It needed the sun and could not keep track of time at night. Through the centuries, many things have been used to keep track of time. In our modern society, we have used clocks. There are two types of clocks – digital and analog. Digital clocks display the time as numbers.

Analog clocks are clocks with hands. The shorter hand tells the hour and the longer hand tells the minutes. An easy way to remember the hour hand and the minutes hand is that **hour** is a shorter word than **minute** and the shorter hand tells the hour.

In an analog clock, the minute hand travels faster than the hour hand as it has to cover 60 minutes. The hour hand only needs to travel between the numerals in the same time it takes the minute hand to cover 60 minutes.

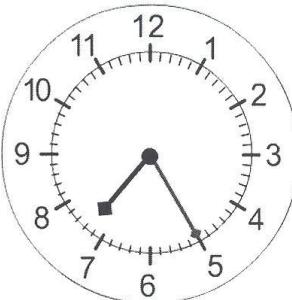

To tell what time it is, look at the shorter hand to figure out what hour it is. Next, look at the minute hand to figure out the minutes. Each numeral of the clock represents a certain number of minutes. Look at the chart.

Numeral	Minutes
1	5
2	10
3	15
4	20
5	25
6	30
7	35
8	40
9	45
10	50
11	55
12	o'clock

Exercise One

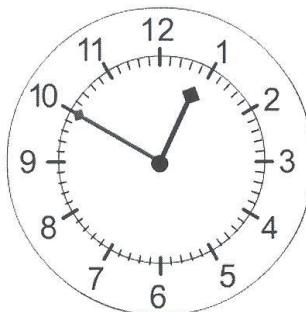

Write the time shown on each clock. Check your work using the answer key at the end of the exercise.

Example A:

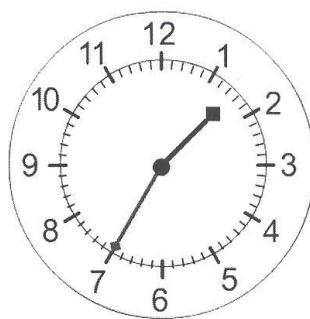

The shorter hand is closer to the 7. The longer hand is before the six. This means that the hour is 7. The longer hand is pointing to the 5. This means 25 minutes (check the chart on the page before). The time would be written as 7:25.

Example B:

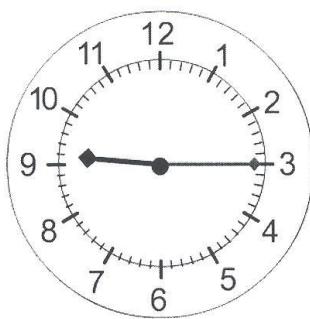

Look at the shorter hand. If the longer hand is past the six, then the hour is the numeral before the one the shorter hand is pointing at. This means that the hour is 12. The longer hand is pointing at the 10. This means 50 minutes (check the chart on the page before). The time would be written as 12:50.

There are 60 minutes in an hour. The numbers on the clock show 5-minute intervals. You are getting good at telling time when the minute hand is stopped at one of the numbers on the clock. If the minute hand is between the numbers, look at the number before and count by ones from there.

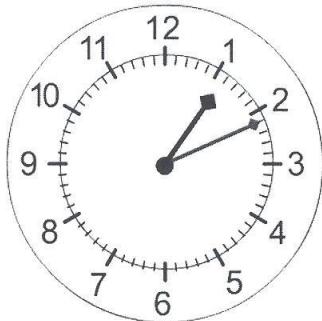

Example:

The time on this clock is 3:27. The minute hand is just pass the 5 which is 25 minutes and counting from there two lines is 27 minutes.

24-hour Clock

Your friend said she would meet you at 8:00 o'clock. Does that mean in the morning or the evening? We use a.m. and p.m. to know whether it is morning or evening.

Another way to avoid confusion is by using the **24-hour clock**. Airlines, military and health care are examples of places where the 24-hour clock is used.

With the 12-hour clock, each of the hours is repeated in a day. In the 24-hour clock, each hour in a day is counted giving us 24 hours. In the 24-hour clock, 12:00 a.m. can be written as 0000 or 2400. 0000 is the start of a new day, while 2400 is the end of the day.

We write times with 4 digits. The first two digits are the hours and the next two digits are the minutes.

12-hour clock	24-hour clock	12-hour clock	24-hour clock
12:00 a.m.	0000 or 2400	12:00 p.m.	1200
1:00 a.m.	0100	1:00 p.m.	1300
2:00 a.m.	0200	2:00 p.m.	1400
3:00 a.m.	0300	3:00 p.m.	1500
4:00 a.m.	0400	4:00 p.m.	1600
5:00 a.m.	0500	5:00 p.m.	1700
6:00 a.m.	0600	6:00 p.m.	1800
7:00 a.m.	0700	7:00 p.m.	1900
8:00 a.m.	0800	8:00 p.m.	2000
9:00 a.m.	0900	9:00 p.m.	2100
10:00 a.m.	1000	10:00 p.m.	2200
11:00 a.m.	1100	11:00 p.m.	2300

For example, 8:20 a.m. would be 0820, while 8:20 p.m. would be 2020.

To convert 12-hour clock to 24-hour clock, add 12 to the hour for any times after 1:00 p.m. to 11:59 p.m.

Example: **6:30 p.m.**

$$6:30 + 12:00 = 1830$$

Example: **10:30 p.m.**

$$10:30 + 12:00 = 2230$$

When writing times in 24-hour clock, we do not use a colon.

Topic D: Adding Units of Time

Sometimes we need to add units of time to find out how much in total it will take to do some job or to travel to some other place.

To add units of time, do this:

- Place the numbers to be added in columns – minutes with minutes, hours with hours, seconds with seconds
- Add each column. Be sure to write the unit of time.

Example A:

$$\begin{array}{r} 12 \text{ h, } 45 \text{ min} \\ + 10 \text{ h, } 05 \text{ min} \\ \hline \end{array}$$

Step 1: Add the minutes to the minutes

$$45 \text{ min} + 05 \text{ min} = 50 \text{ min}$$

$$\begin{array}{r} 12 \text{ h, } 45 \text{ min} \\ + 10 \text{ h, } 05 \text{ min} \\ \hline 50 \text{ min} \end{array}$$

Step 2: Add the hours to the hours

$$12 \text{ h} + 10 \text{ h} = 22 \text{ h}$$

$$\begin{array}{r} 12 \text{ h, } 45 \text{ min} \\ + 10 \text{ h, } 05 \text{ min} \\ \hline 22 \text{ h} \end{array}$$

The sum of

$$\begin{array}{r} 12 \text{ h, } 45 \text{ min} \\ + 10 \text{ h, } 05 \text{ min} \\ \hline 22 \text{ h, } 50 \text{ min} \end{array}$$

Example B:
$$\begin{array}{r} 4 \text{ h, } 50 \text{ min, } 15 \text{ s} \\ + 21 \text{ h, } 05 \text{ min, } 40 \text{ s} \\ \hline \end{array}$$

Step 1: **Add the seconds to the seconds.**

$$15 \text{ s} + 40 \text{ s} = 55 \text{ s}$$

$$\begin{array}{r} 4 \text{ h, } 50 \text{ min, } 15 \text{ s} \\ + 21 \text{ h, } 05 \text{ min, } 40 \text{ s} \\ \hline 55 \text{ s} \end{array}$$

Step 2: **Add the minutes to the minutes**

$$50 \text{ min} + 05 \text{ min} = 55 \text{ min}$$

$$\begin{array}{r} 4 \text{ h, } 50 \text{ min, } 15 \text{ s} \\ + 21 \text{ h, } 05 \text{ min, } 40 \text{ s} \\ \hline 55 \text{ min} \end{array}$$

Step 3: **Add the hours to the hours**

$$4 \text{ h} + 21 \text{ h} = 25 \text{ h}$$

$$\begin{array}{r} 4 \text{ h, } 50 \text{ min, } 15 \text{ s} \\ + 21 \text{ h, } 05 \text{ min, } 40 \text{ s} \\ \hline 25 \text{ h} \end{array}$$

The sum of
$$\begin{array}{r} 4 \text{ h, } 50 \text{ min, } 15 \text{ s} \\ + 21 \text{ h, } 05 \text{ min, } 40 \text{ s} \\ \hline 25 \text{ h, } 55 \text{ min, } 55 \text{ s} \end{array}$$

Exercise Three

Rewrite each question in columns. Be careful to write seconds under seconds, minutes under minutes and hours under hours. Check your work using the answer key at the end of the exercise.

- a)** Fabio worked 8 h, 48 min on his homework. The following week, he worked 9 h, 10 min on his homework. How much time in total did he work on his homework?

b) Day one of the holiday trip took 11 h, 32 min. Day two took 10 h, 26 min. How long time did we travel in two days?

- c) Ajani recorded 4 h, 51 min of music. The next day, Ajani recorded 3 h, 04 min more. How much music did he have in all?
- d) Cristiano finished the race in 2 hr, 30 min, 43 s. Say finished the race in 3 h, 19 min, 12 s. What is the total of their times?
- e) In May, Dorian used his cell phone for 18 h, 37 min, 20 s. In June, he used his cell phone for 17 h, 22 min, 18 s. How long did he use his cell phone for the two months?

Subtracting Units of Time

We need to subtract units of time to find out how much time it took to do some job or to travel to some other place.

To subtract units of time, do this:

- Place the numbers to be subtracted in columns – minutes with minutes, hours with hours, seconds with seconds
- Subtract each column. Be sure to write the unit of time.

Example A: $\begin{array}{r} 2 \text{ h, } 45 \text{ min} \\ - 1 \text{ h, } 05 \text{ min} \\ \hline \end{array}$

Step 1: **Subtract the minutes from the minutes**

$$45 \text{ min} - 05 \text{ min} = 40 \text{ min}$$

$$\begin{array}{r} 2 \text{ h, } 45 \text{ min} \\ - 1 \text{ h, } 05 \text{ min} \\ \hline 40 \text{ min} \end{array}$$

Step 2: **Subtract the hours from the hours**

$$2 \text{ h} - 1 \text{ h} = 1 \text{ h}$$

$$\begin{array}{r} 2 \text{ h, } 45 \text{ min} \\ - 1 \text{ h, } 05 \text{ min} \\ \hline 1 \text{ h} \end{array}$$

The difference of $\begin{array}{r} 2 \text{ h, } 45 \text{ min} \\ - 1 \text{ h, } 05 \text{ min} \\ \hline 1 \text{ h, } 40 \text{ min} \end{array}$

Example B: **5 h, 45 min, 10 s**
 - 2 h, 35 min, 05 s

Step 1: **Subtract the seconds from the seconds.**

$$10 \text{ s} - 05 \text{ s} = 05 \text{ s}$$

$$\begin{array}{r} 5 \text{ h, 45 min, 10 s} \\ - 2 \text{ h, 35 min, 05 s} \\ \hline 05 \text{ s} \end{array}$$

Step 2: **Subtract the minutes from the minutes**

$$45 \text{ min} - 35 \text{ min} = 10 \text{ min}$$

$$\begin{array}{r} 4 \text{ h, 45 min, 10 s} \\ - 2 \text{ h, 35 min, 05 s} \\ \hline 10 \text{ min} \end{array}$$

Step 3: **Subtract the hours from the hours**

$$5 \text{ h} - 2 \text{ h} = 3 \text{ h}$$

$$\begin{array}{r} 5 \text{ h, 45 min, 10 s} \\ - 2 \text{ h, 35 min, 05 s} \\ \hline 3 \text{ h} \end{array}$$

The sum of **5 h, 45 min, 10 s**
 - 2 h, 35 min, 05 s
 3 h, 10 min, 05 s

Exercise Six

Rewrite each question in columns. Be careful to write seconds under seconds, minutes under minutes and hours under hours. Check your work using the answer key at the end of the exercise.

- a) Milan works 45 h, 30 min each week. He has worked 32 h, 15 min this week. How much more time can he work?

 - b) The trip from Vancouver to Calgary takes 17 h, 40 min on the bus. The trip from Vancouver to Kamloops takes 5 h, 05 min. How much longer must you travel to get to Calgary?

- c) The flight from Vancouver to Toronto leaves at 12 h, 30 min. The flight arrives in Toronto at 15 h, 53 min. How long is the flight from Vancouver to Toronto?
- d) Over two months, Lola has used her cell phone for 43 h, 37 min, 58 s. In June, she used her cell phone for 21 h, 22 min, 25 s. How much time has she used her cell phone this month?
- e) During the Vancouver Marathon, the first runner crossed the finish line in 2 h, 16 min, 55 s. Another runner crossed the finish line in 4 hr, 26 min, 56 s. What is the difference in their times?

F.

- a) 1 h, 03 min b) 1 h, 08 min

Topic E: Perimeter

Perimeter is from the Greek language. **Peri** means "around". Perimeter is the distance **around** something. If you walked around the outside of your building, you would have walked close to the perimeter of the building. (The actual perimeter would be the outside wall which is a little tricky to walk on!) A fence around a field is *at the perimeter* of the field. In this sense, we are using perimeter to mean "the outside edge". The length of the entire fence is the measure of the perimeter.

Example A: Picture yourself going for a walk, starting at the door of your building.

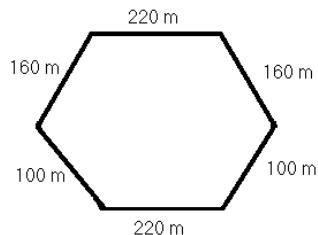

Your walk was in the shape of an octagon. How far did you walk?

When you add together all the distances, you get 1 200 m.

You have just found the perimeter of an octagon.

Example B: The new memorial park was built in an interesting shape. The park is a hexagon. A walking path goes around the perimeter of the park. How long is the path?

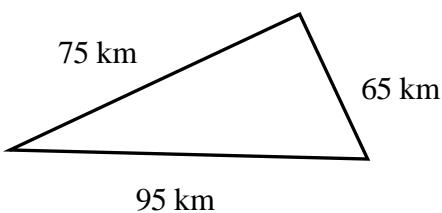

Add the measure of each side of the park. The perimeter of this hexagon is 960 m.

To find the perimeter of a polygon, add the lengths of all the sides together.

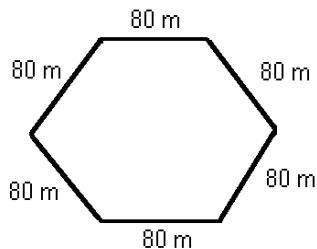

Exercise One

Find the perimeter of each figure. Be sure to include the units of measure in your answer. Check your work using the answer key at the end of the exercise.

Finding the Perimeter of a Square

Write the definition of a square.

By definition then, a square has four sides that are all congruent (have the same measure).

To find the perimeter you can add the four sides.

$$\text{Perimeter} = \\ 8 \text{ cm} + 8 \text{ cm} + 8 \text{ cm} + 8 \text{ cm} = 32 \text{ cm}$$

Exercise Two

Find the perimeter of the **squares** described in each question.
The measure of one side has been given. Be sure to include the units of measure in your answer. Check your work using the answer key at the end of the exercise.

a) $s = 75 \text{ m}$
 $P = 75 \text{ m} + 75 \text{ m} + 75 \text{ m} + 75 \text{ m}$
 $P = \underline{\hspace{2cm}}$

b) $s = 12 \text{ mm}$
 $P = \underline{\hspace{2cm}}$

c) $s = 100 \text{ km}$
 $P = \underline{\hspace{2cm}}$

d) $s = 50 \text{ cm}$
 $P = \underline{\hspace{2cm}}$

e) $s = 130 \text{ m}$

$P = \underline{\hspace{2cm}}$

f) $s = 1\ 000 \text{ km}$

Problems using the Perimeters of Squares

Example A: Ted needs to build a fence around his swimming pool. The swimming pool with its deck is a square shape that measures 35 m per side. How much fencing must Ted buy?

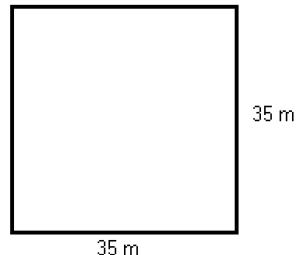

Step 1: Question.

How much fencing must Ted buy?

Step 2: Find the needed information—drawing a sketch is often helpful.

- fence around a square pool

$$s = 35 \text{ m}$$

Step 3: Operations

The fence is a perimeter, so find the perimeter of a square.

$$P = 35 \text{ m} + 35 \text{ m} + 35 \text{ m} + 35 \text{ m}$$

$$P = 140 \text{ m of fence}$$

Ted must buy 140 m of fencing.

Exercise Three

Solve these problems using perimeters of squares. The problems may need two operations. Be sure to include the units of measure in your answer. Check your work using the answer key at the end of the exercise.

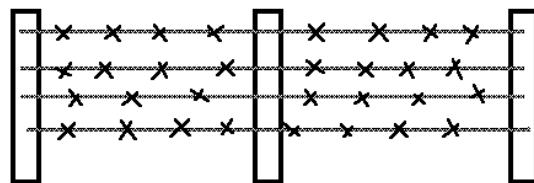

- a) The campground security officer walks around the outside of the campground four times every evening. The campground is 800 m square. How far does the officer walk in these patrols each night?

Note: *800 m square* is a common way of saying "a square with sides that measure 800 m."

- b) Lee is going to install base boards in the recreation room he has built in his basement. The room is five metres square. The baseboard material is expensive, so he will be sure to deduct 1 m for each of the two doorways. How much baseboard material does he need to buy?

- c) Phil is going to fence his large 50 m square vegetable garden to keep the deer out. The fence will be made with four strands of barbed wire. How much barbed wire should Phil buy?

The fence will look like this:

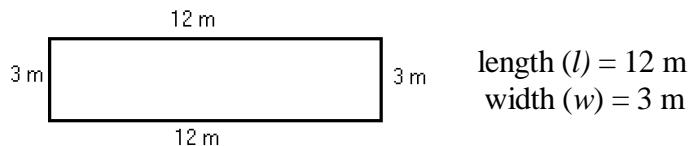

Answers to Exercise Three

- a) 12 800 metres b) 18 metres c) 800 metres

Finding the Perimeter of a Rectangle

Write the definition of a rectangle.

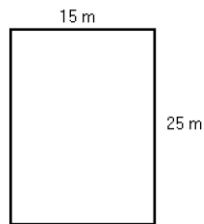

Example A:

To find the perimeter you can find the sum of
 $12 \text{ m} + 3 \text{ m} + 12 \text{ m} + 3 \text{ m} = 30 \text{ m}$

Example B:

Find the perimeter of a rectangle 25 m long and 15 m wide.

$$\begin{aligned} P &= 15 \text{ m} + 25 \text{ m} + 15 \text{ m} + 25 \text{ m} \\ &= 80 \text{ m} \end{aligned}$$

Exercise Four

Find the perimeter of the **rectangles** described below. Draw and label a sketch for each. Be sure to include the units of measure in your answer. Check your work using the answer key at the end of the exercise.

a) $l = 10 \text{ cm}$
 $w = 6 \text{ cm}$
 $P = \underline{\hspace{2cm}}$

b) $l = 100 \text{ km}$
 $w = 70 \text{ km}$
 $P = \underline{\hspace{2cm}}$

c) $l = 15 \text{ mm}$
 $w = 10 \text{ mm}$
 $P = \underline{\hspace{2cm}}$

d) $l = 97 \text{ cm}$
 $w = 35 \text{ cm}$
 $P = \underline{\hspace{2cm}}$

e) $l = 400 \text{ km}$
 $w = 100 \text{ km}$
 $P = \underline{\hspace{2cm}}$

f) $l = 42 \text{ m}$
 $w = 67 \text{ m}$
 $P = \underline{\hspace{2cm}}$

g) $l = 132 \text{ m}$
 $w = 76 \text{ m}$
 $P = \underline{\hspace{2cm}}$

h) $l = 196 \text{ cm}$
 $w = 28 \text{ cm}$

Exercise Five

Solve these problems. Draw and label a sketch for each. Be sure to include the units of measure in your answer. Check your work using the answer key at the end of the exercise.

- a) Janice plans to sew lace on the edge of a tablecloth that is 132 cm in width and 218 cm long. How much lace does she need?

b) One physical education teacher starts each class by having everyone jog around the school 4 times. The school is rectangular (shaped like a rectangle) and 160 m long and 95 m wide. About how far do the students jog each class?
Note: 160 m long and 95 m wide may be written as "160 m by 95 m".

- a) How many metres of baseboard are needed for a rectangular room 4 m by 3 m?
Deduct 1 m for each of the two doorways.
- b) Dennis likes to cycle 30 km daily around a cycle path at a local park. The park is rectangular and measures 3 km in width and 5 km in length. How far does Dennis cycle if he rides around the park four times?

- a) Calculate the total amount of weather-stripping needed to go around these windows in a house.

3 windows each measuring 76 cm by 122 cm

2 windows each measuring 152 cm by 135 cm

- b) The Nuoris are going to replace the fascia board (the trim at the edge of a roof) with new pressure-treated cedar board. Their flat roof is 14 m by 12 m. How much fascia board is needed?

CONGRATULATIONS!!

Now you have finished Unit 5.

TEST TIME!

Ask your instructor for the Practice Test for this unit.

Once you've done the practice test,

you need to do the unit 4 test.

Again, ask your instructor for this.

Good luck!

Book 2 Review

You will now practice all the skills you learned in Book 2. Check your work using the answer key at the end of the review.

If you can't remember how to do a question, go back to the lesson on this topic to refresh your memory. The unit and topic for where each question came from is listed next to the question.

Example: **1-B** means Unit 1, Topic B

1-B

- A.** Write the place value names (ones, tens, hundreds, thousands, ten thousands, hundred thousands, millions) for each underlined digit.

a) 1230 _____ b) 234 965 _____

c) 6 245 903 _____ d) 62 198 _____

- B.** Using the number below, write the digit that is in each of the following place values.

452 781 039

a) tens _____ b) ten thousands _____

c) hundred thousands _____ d) millions _____

- C.** Underline the digit for the place value named.

a) thousands 182 374 b) hundreds 1 051

c) hundred thousands 3 142 650 d) thousands 21 087

- D.** Write the word names for the numbers.

a) 63 374 _____

b) 7 248 _____

E. Write numerals for these word names.

a) three million, two hundred fourteen thousand, five hundred sixty-seven

b) fifty-one thousand, two hundred two

1-C

F. Write each number in expanded form.

a) 3 479

b) 21 016

G. Write each number from expanded form.

i. $4\ 000\ 000 + 100\ 000 + 10\ 000 + 3\ 000 + 200 + 40 + 8 =$

ii. $100\ 000 + 80\ 000 + 2\ 000 + 300 + 4 =$

1-D

H. Arrange these numbers in order from smallest to largest.

a) 312 23 2 154 2 514 633 43 5 412

b) 45 554 544 5 454 5 544 55 454 445

I. Write <, > or = in each blank as needed.

a) 76 125 _____ 71 625

b) 4 325 _____ 3 425

c) 14 527 _____ 14 752

d) 65 234 _____ 65 234

1-E

J. Round each number to the nearest 100.

a) 672 _____

b) 3 473 _____

K. Round each number to the nearest 1 000.

a) 41 370 _____

b) 64 921 _____

L. Round each number to the nearest 10 000.

a) 76 125 _____

b) 582 412 _____

M. Round each number to the nearest 100 000.

a) 351 257 _____

b) 8 675 247 _____

N. Round each number to the nearest 1 000 000.

a) 7 351 257 _____

CONGRATULATIONS!!

Now you have finished Book 2.

TEST TIME!

Ask your instructor for the Practice Test for this book.

Once you've done the practice test,

you need to do the end test.

Again, ask your instructor for this.

Good luck!

Glossary

addends The numbers to be added together in an addition question. In $3 + 5 = 8$, the addends are 3 and 5.

axis Any straight line used for measuring or as a reference.

balance Balance has many meanings. In money matters, the balance is the amount left. It might be the amount left in a bank account (bank balance) or it might be the amount you still must pay on a bill (balance owing).

cancelled cheque A cheque that has been cashed. The cheque is stamped, or cancelled, so it is no longer negotiable.

circumference The distance around a circle; the perimeter of a circle.

commission Salespeople may be paid a percentage of the money made in sales. The commission is part or all their earnings.

common fractions eg, $\frac{2}{3}, \frac{3}{7}, \frac{49}{50}$

cross multiply In a proportion, multiply the numerator of the first fraction times the denominator of the second fraction. Then multiply the denominator of the first fraction times the numerator of the second fraction. In a true proportion, the products of the cross multiplication are equal.

denominator The bottom number in a common fraction; tells into how many equal parts the whole thing has been divided.

diameter The distance across a circle through its centre.

difference The result of a subtraction question, the answer. Subtraction gives the difference between two numbers.

digit Any of the ten numerals (0 to 9) are digits. This term comes from our ten fingers which are called digits. The numerals came to be called "digits" from the practice of counting on the fingers!

discount An amount taken off the regular cost. If something is bought "at a discount" it is bought at less than the regular price.

divide To separate into equal parts.

dividend The number or quantity to be divided; what you start with before you divide.

divisor The number of groups or the quantity into which a number (the dividend) is to be separated.

equal = The same as

equation A mathematical statement that two quantities are equal. An equation may use numerals with a letter to stand for an unknown quantity. $6 + Y = 9$

equivalent Equal in value; equivalent numbers (whole or fractions) can be used interchangeably; that is, they can be used instead of each other.

estimate Make an approximate answer. Use the sign \approx to mean approximately equal.

factors The numbers or quantities that are multiplied together to form a given product. $5 \times 2 = 10$, so 5 and 2 are factors of 10.

fraction Part of the whole; a quantity less than one unit.

horizontal in a flat position; we are horizontal when we lie in a bed. A horizontal line goes across the page.

improper fraction A common fraction with a value equal to or more than one.

infinite Without end, without limit.

invert To turn upside down.

like fractions With the same denominators.

lowest terms When the terms of a common fraction or ratio do not have a common factor (except 1), the fraction or ratio are in lowest terms (also called simplest form).

minuend The first number in a subtraction question.

mixed number A whole number and a common fraction. $1\frac{3}{4}$

mixed decimal A whole number and a decimal fraction. 1.75

multiple If a certain number is multiplied by another number, the product is a multiple of the numbers. Think of the multiplication tables. For example, 2, 4, 6, 8, 10, 12, 14...are multiples of 2.

multiplicand The number to be multiplied.

multiplier The number you multiply by.

negotiable Something which can be cashed, that is, exchanged or traded as money.

numbers Numbers represent the amount, the place in a sequence; *number* is the idea of quantity or order.

numerals The digits 1,2,3,4,5,6,7,8,9,0 are also called numerals. These ten digits are combined to make infinite numerals. Digits are like the letters, numerals are like the words and numbers are the meaning.

numerator The top number in a common fraction; the numerator tells how many parts of the whole thing are being considered.

overdrawn If the value of the cheques or money taken from a bank account is higher than the amount of money in the account, then the account is overdrawn. The account is "in the hole" or "in the red" are expressions sometimes used.

parallel Two objects or lines side by side, never crossing and always the same distance from each other. Railway tracks are parallel, the lines on writing paper are parallel.

percent % For every one hundred.

perimeter The distance around the outside of a shape.

place value We understand numbers by the way the digits (numerals) are arranged in relationship to each other and to the decimal point. Each position has a certain value. Our number system is a **decimal system**. The place value is based on **ten**.

prime number A number that can only be divided evenly by itself and 1.

product The result of a multiplying question, the answer.

proper fraction A common fraction with a value less than one.

proportion Generally, proportion is a way of comparing a part of something to the whole thing. Eg. his feet are small in proportion to his height. In mathematics, proportion is used to describe two or more ratios that are equivalent to each other.

quotient The result of a division question; the quotient tells how many times one number is contained in the other.

radius The distance from the centre of a circle to the outside of the circle.

ratio The relationship between two or more quantities. Eg. the ratio of men to women in the armed forces is 10 to 3 (10:3)

reciprocal A number, when multiplied by its reciprocal, equals 1. To find the reciprocal of a common fraction, invert it. $\frac{3}{5} \times \frac{5}{3} = 1$

reduce Write a common fraction in lowest terms. Divide both terms by same factor.

remainder The amount left when a divisor does not divide evenly into the dividend. The remainder must be less than the divisor.

sign In mathematics, a symbol that tells what operation is to be performed or what the relationship is between the numbers.

- + plus, means to add
- minus, means to subtract
- × multiplied by, "times"
- ÷ divided by, division
- = equal, the same quantity as
- ≠ not equal
- ≈ approximately equal
- < less than
- > greater than
- ≤ less than or equal to
- ≥ greater than or equal to

simplify See *reduce*.

subtrahend The amount that is taken away in a subtraction question.

sum The result of an addition question, the answer to an addition question.

symbol A written or printed mark, letter, abbreviation etc. that stands for something else.

term a) A definite period of time, such as a school term or the term of a loan.
b) Conditions of a contract; the terms of the agreement. c) In mathematics, the quantities in a fraction and in a ratio are called the *terms* of the fraction or the *terms* of the ratio. In an algebra equation, the quantities connected by a + or - sign are also called terms.

total The amount altogether.

transaction One piece of business. A transaction often involves money. When you pay a bill, take money from the bank or write a cheque, you have made a transaction.

unit Any fixed quantity, amount, distance or measure that is used as a standard. In mathematics, always identify the unit with which you are working. Eg. 3 km, 4 cups, 12 people, \$76, 70 books, 545 g.

unit price The price for a set amount. Eg. price per litre, price per gram.

unlike fractions Fractions which have different denominators.

vertical in an up and down position; we are vertical when we are standing up. On a page, a vertical line is shown from the top to the bottom of the page.
